## **Chapter 1 - Getting Started**

|  |     |
|--|-----|
| Introduction .....                                     | 1-1 |
| About This Manual .....                                | 1-1 |
| Unpacking Your Device .....                            | 1-1 |
| OEM Scan Engine Models .....                           | 1-1 |
| Connecting the Development Scan Engine to the PC ..... | 1-2 |
| Connecting with USB .....                              | 1-2 |
| Connecting with RS232 Serial Port .....                | 1-3 |
| Reading Techniques .....                               | 1-4 |
| Menu Bar Code Security Settings .....                  | 1-4 |
| Setting Custom Defaults .....                          | 1-4 |
| Resetting the Custom Defaults .....                    | 1-5 |

## **Chapter 2 - Programming the Interface**

|   |      |
|---|------|
| Introduction .....  | 2-1  |
| Programming the Interface - Plug and Play .....                           | 2-1  |
| Keyboard Wedge .....  | 2-1  |
| Laptop Direct Connect .....   | 2-1  |
| RS232 Serial Port .....   | 2-1  |
| USB IBM SurePos .....   | 2-2  |
| USB PC or Macintosh Keyboard .....  | 2-2  |
| USB HID .....   | 2-2  |
| USB Serial .....  | 2-3  |
| Verifone <sup>®</sup> Ruby Terminal Default Settings .....                | 2-3  |

| Wincor Nixdorf Beetle <sup>™</sup> Terminal Default Settings .....        | 2-5  |
| Wincor Nixdorf RS232 Mode A .....   | 2-6  |
| Keyboard Country Layout .....   | 2-7  |
| Keyboard Style .....  | 2-14 |
| Keyboard Conversion .....   | 2-15 |
| Control Character Output .....  | 2-16 |
| Keyboard Modifiers .....  | 2-16 |

---

|   |      |
|---|------|
| RS232 Modifiers .....                                     | 2-17 |
| RS232 Baud Rate .....                                     | 2-17 |
| RS232 Word Length: Data Bits, Stop Bits, and Parity ..... | 2-18 |
| RS232 Receiver Time-Out.....                              | 2-19 |
| RS232 Handshaking.....                                    | 2-19 |
| RS232 Timeout.....  | 2-20 |
| XON/XOFF .....  | 2-20 |
| ACK/NAK .....   | 2-21 |
| RS232 Stop Mode .....                                     | 2-21 |
| Scanner to Bioptic Communication .....                    | 2-21 |
| Scanner-Bioptic Packet Mode .....                         | 2-21 |
| Scanner-Bioptic ACK/NAK Mode.....                         | 2-22 |
| Scanner-Bioptic ACK/NAK Timeout.....                      | 2-22 |

### **Chapter 3 - Input/Output Settings**

|   |      |
|---|------|
| Power Up Beeper .....   | 3-1  |
| Beep on BEL Character.....  | 3-1  |
| Trigger Click .....   | 3-1  |
| Good Read and Error Indicators.....   | 3-2  |
| Beeper – Good Read.....   | 3-2  |
| Beeper Volume – Good Read.....  | 3-2  |
| Beeper Pitch – Good Read.....   | 3-2  |
| Beeper Pitch – Error .....  | 3-3  |
| Beeper Duration – Good Read .....   | 3-3  |
| LED – Good Read .....   | 3-3  |
| Number of Beeps – Good Read .....   | 3-4  |
| Number of Beeps – Error.....  | 3-4  |
| Good Read Delay .....   | 3-4  |
| User-Specified Good Read Delay.....   | 3-4  |
| Manual Trigger Mode .....   | 3-5  |
| When in manual trigger mode, the scanner scans until a bar code is read, or until the trigger is released. .... | 3-5  |
| LED Illumination - Manual Trigger .....   | 3-5  |
| Serial Trigger Mode .....   | 3-5  |
| Read Time-Out .....   | 3-5  |
| Presentation Mode .....   | 3-5  |
| Idle Illumination - Presentation Mode .....   | 3-6  |
| Presentation Sensitivity .....  | 3-6  |
| Presentation Centering.....   | 3-6  |
| Poor Quality Codes .....  | 3-8  |
| Poor Quality 1D Codes.....  | 3-8  |
| Poor Quality PDF Codes .....  | 3-9  |
| CodeGate® .....   | 3-9  |
| Mobile Phone Read Mode .....  | 3-10 |
| Hands Free Time-Out.....  | 3-10 |
| Reread Delay.....   | 3-10 |
| User-Specified Reread Delay .....   | 3-11 |
| 2D Reread Delay .....   | 3-11 |

---

|  |      |
|--|------|
| Character Activation Mode .....                | 3-11 |
| Activation Character .....                     | 3-12 |
| End Character Activation After Good Read ..... | 3-12 |
| Character Activation Timeout .....             | 3-12 |
| Character Deactivation Mode .....              | 3-13 |
| Deactivation Character .....                   | 3-13 |
| Illumination Lights .....                      | 3-13 |
| Aimer Delay .....                              | 3-13 |
| User-Specified Aimer Delay .....               | 3-14 |
| Aimer Mode .....                               | 3-14 |
| Centering .....                                | 3-14 |
| No Read .....                                  | 3-16 |
| Video Reverse .....                            | 3-16 |
| Working Orientation .....                      | 3-17 |

### **Chapter 4 - Data Editing**

|   |     |
|---|-----|
| Prefix/Suffix Overview .....                                  | 4-1 |
| To Add a Prefix or Suffix: .....                              | 4-1 |
| To Clear One or All Prefixes or Suffixes .....                | 4-2 |
| To Add a Carriage Return Suffix to All Symbologies .....      | 4-2 |
| Prefix Selections .....                                       | 4-2 |
| Suffix Selections .....                                       | 4-2 |
| Function Code Transmit .....                                  | 4-3 |
| Intercharacter, Interfunction, and Intermmessage Delays ..... | 4-3 |
| Intercharacter Delay .....                                    | 4-3 |
| User Specified Intercharacter Delay .....                     | 4-3 |
| Interfunction Delay .....                                     | 4-4 |
| Intermessage Delay .....                                      | 4-4 |

### **Chapter 5 - Data Formatting**

|                                       |      |
|---------------------------------------|------|
| Data Format Editor Introduction ..... | 5-1  |
| Add a Data Format .....               | 5-1  |
| Other Programming Selections .....    | 5-2  |
| Terminal ID Table .....               | 5-3  |
| Data Format Editor Commands .....     | 5-3  |
| Move Commands .....                   | 5-6  |
| Search Commands .....                 | 5-7  |
| Miscellaneous Commands .....          | 5-9  |
| Data Formatter .....                  | 5-12 |
| Primary/Alternate Data Formats .....  | 5-13 |

### **Chapter 6 - Symbologies**

|                                  |     |
|----------------------------------|-----|
| All Symbologies .....            | 6-1 |
| Message Length Description ..... | 6-1 |
| Codabar .....                    | 6-2 |
| Codabar Concatenation .....      | 6-3 |

---

|  |      |
|--|------|
| Code 39 .....  | 6-4  |
| Code 32 Pharmaceutical (PARAF) .....                   | 6-5  |
| Full ASCII.....  | 6-6  |
| Code 39 Code Page .....                                | 6-6  |
| Interleaved 2 of 5.....                                | 6-7  |
| NEC 2 of 5 .....                                       | 6-8  |
| Code 93 .....  | 6-9  |
| Code 93 Code Page .....                                | 6-10 |

## **Customer Support**

### **Technical Assistance**

If you need assistance installing or troubleshooting your device, please contact us by using one of the methods below:

**Knowledge Base:** [www.hsmknowledgebase.com](http://www.hsmknowledgebase.com)

Our Knowledge Base provides thousands of immediate solutions. If the Knowledge Base cannot help, our Technical Support Portal (see below) provides an easy way to report your problem or ask your question.

**Technical Support Portal:** [www.hsmsupportportal.com](http://www.hsmsupportportal.com)

The Technical Support Portal not only allows you to report your problem, but it also provides immediate solutions to your technical issues by searching our Knowledge Base. With the Portal, you can submit and track your questions online and send and receive attachments.

**Web form:** [www.hsmcontactsupport.com](http://www.hsmcontactsupport.com)

You can contact our technical support team directly by filling out our online support form. Enter your contact details and the description of the question/problem.

**Telephone:** [www.honeywellaidc.com/locations](http://www.honeywellaidc.com/locations)

For our latest contact information, please check our website at the link above.

### **Product Service and Repair**

Honeywell International Inc. provides service for all of its products through service centers throughout the world. To obtain warranty or non-warranty service, please visit [www.honeywellaidc.com](http://www.honeywellaidc.com) and select **Support > Contact Service and Repair** to see your region's instructions on how to obtain a Return Material Authorization number (RMA #). You should do this prior to returning the product.

### **Limited Warranty**

Refer to [www.honeywellaidc.com/warranty\\_information](http://www.honeywellaidc.com/warranty_information) for your product's warranty information.

### **Send Feedback**

Your feedback is crucial to the continual improvement of our documentation. To provide feedback about this manual, contact the Honeywell Technical Communications department at [ACSHSMTechnicalCommunications@honeywell.com](mailto:ACSHSMTechnicalCommunications@honeywell.com).

# Getting Started

## Introduction

The N36XX scan engine is designed for integration into a wide range of OEM devices. The scan engine's compact mechanical design can drop into many existing applications, allowing OEMs and third-party manufacturers to integrate the benefits of image-based scanning into a variety of devices, including hand held computers (PDTs, medical instrumentation, kiosks, diagnostic equipment, and robotics. The N36XX unit decodes linear, 2D, postal codes, and OCR features.

## About This Manual

This User's Guide provides demonstration, installation, and programming instructions for the N36XX scan engine.

Honeywell's bar code scan engines are factory programmed for the most common terminal and communications settings. If you need to change these setting, programming is accomplished by scanning the bar codes in this guide.

An asterisk (\*) next to an option indicates the default setting.

## Unpacking Your Device

After you open the shipping carton containing the OEM scan engine(s), take the following steps:

- Check for damage during shipment. Report damage immediately to the carrier who delivered the carton.
- Make sure the items in the carton match your order.
- Save the shipping container for later storage or shipping.

## OEM Scan Engine Models

There are two models of the OEM scan engine, which may be used with the interfaces described in this manual. Refer to the chart below to determine the models that can be used with your interface.

| Models        | Interface      | Decoding Capability     |
|---------------|----------------|-------------------------|
| N3680X-XX-TTL | TTL Level 232  | Linear, 2D, postal, OCR |
| N3680X-XX-USB | Full-Speed USB | Linear, 2D, postal, OCR |

---

## Connecting the Development Scan Engine to the PC

The development OEM scan engine can connect to a PC for evaluation.

### Connecting with USB

*Note: The N3680XX-XX-USB scan engine will only communicate USB through the 10 pin modular connector.*

1. Turn off power to the terminal/computer.
2. If using full-speed USB, connect the USB interface cable to the interface board and to the matching USB port on the computer.

3. Verify the scan engine operation by scanning a bar code from the [Sample Symbols](#) in the back of this manual. The scan engine beeps once when a bar code is successfully decoded.

---

## Connecting with RS232 Serial Port

1. If using an RS-232 connection, connect the serial interface cable to the interface board and to the matching port on the back of the computer.

2. Connect the power supply connector to the serial interface cable. Plug in the power supply.
3. Turn the terminal/computer power back on. The scan engine beeps.
4. If connecting the scan engine using an RS-232 interface, all communication parameters between the scan engine and terminal must match for correct data transfer through the serial port using RS-232 protocol. Scan the RS-232 interface bar code below. This programs the scan engine for an RS-232 interface at 115,200 baud, parity–none, 8 data bits, 1 stop bit, and adds a suffix of a CR LF.

PAP232.

RS-232 Interface

5. Verify the scan engine operation by scanning a bar code from the [Sample Symbols](#) in the back of this manual. The scan engine beeps once when a bar code is successfully decoded.

To connect an scan engine to your host system, refer to the N36XX Integration Manual.

---

## Reading Techniques

The scan engine has a view finder that projects a bright red aiming beam that corresponds to the scan engine's horizontal field of view. The aiming beam should be centered over the bar code, but it can be positioned in any direction for a good read.

The aiming beam is smaller when the scan engine is closer to the code and larger when it is farther from the code. Symbologies with smaller bars or elements (mil size) should be read closer to the unit. Symbologies with larger bars or elements (mil size) should be read farther from the unit. To read single or multiple symbols (on a page or on an object), hold the scan engine at an appropriate distance from the target, pull the trigger, and center the aiming beam on the symbol. If the code being scanned is highly reflective (e.g., laminated), it may be necessary to tilt the code up 15° to 18° to prevent unwanted reflection.

## Menu Bar Code Security Settings

Honeywell scan engines are programmed by scanning menu bar codes or by sending serial commands to the scan engine. If you want to restrict the ability to scan menu codes, you can use the Menu Bar Code Security settings. Contact the nearest technical support office [Technical Assistance](#) on page vii for further information.

## Setting Custom Defaults

You have the ability to create a set of menu commands as your own, custom defaults. To do so, scan the **Set Custom Defaults** bar code below before scanning the menu commands for your custom defaults. If a menu command requires scanning numeric codes from the back cover, then a **Save** code, that entire sequence will be saved to your custom defaults. When you have entered all the commands you want to save for your custom defaults, scan the **Save Custom Defaults** bar code.

You may have a series of custom settings and want to correct a single setting. To do so, just scan the new setting to overwrite the old one. For example, if you had previously saved the setting for Beeper Volume at Low to your custom defaults, and decide

---

you want the beeper volume set to High, just scan the **Set Custom Defaults** bar code, then scan the Beeper Volume High menu code, and then **Save Custom Defaults**. The rest of the custom defaults will remain, but the beeper volume setting will be updated.

### ***Resetting the Custom Defaults***

If you want the custom default settings restored to your scan engine, scan the **Activate Custom Defaults** bar code below. This is the recommended default bar code for most users. It resets the scan engine to the custom default settings. If there are no custom defaults, it will reset the scan engine to the factory default settings. Any settings that have not been specified through the custom defaults will be defaulted to the factory default settings.

DEFAULT.

**Activate Custom Defaults**

# Programming the Interface

## Introduction

This chapter describes how to program your system for the desired interface.

## Programming the Interface - Plug and Play

Plug and Play bar codes provide instant scan engine set up for commonly used interfaces.

*Note: After you scan one of the codes, power cycle the host terminal to have the interface in effect.*

### Keyboard Wedge

If you want your system programmed for an IBM PC AT and compatibles keyboard wedge interface with a USA keyboard, scan the bar code below. Keyboard wedge is the default interface.

*Note: The following bar code also programs a carriage return (CR) suffix.*

### Laptop Direct Connect

For most laptops, scanning the **Laptop Direct Connect** bar code allows operation of the scan engine in parallel with the integral keyboard. The following **Laptop Direct Connect** bar code also programs a carriage return (CR) suffix and turns on Emulate External Keyboard ([page 2-15](#)).

### RS232 Serial Port

The **RS232 Interface** bar code is used when connecting to the serial port of a PC or terminal. The following **RS232 Interface** bar code also programs a carriage return (CR) and a line feed (LF) suffix, baud rate, and data format as indicated below. It also changes the trigger mode to manual.

| Option      | Setting                                |
|-------------|--|
| Baud Rate   | 115,200 bps                            |
| Data Format | 8 data bits, no parity bit, 1 stop bit |

---

## USB IBM SurePos

Scan one of the following “Plug and Play” codes to program the scan engine for an IBM SurePos (USB handheld scanner) or IBM SurePos (USB tabletop scanner) interface.

*Note: After scanning one of these codes, you must power cycle the cash register.*

PAPSPH.  
**USB IBM SurePos  
(USB Handheld Scanner)  
Interface**

PAPSPT.  
**USB IBM SurePos  
(USB Tabletop Scanner)  
Interface**

Each bar code above also programs the following suffixes for each symbology:

| Symbology | Suffix | Symbology          | Suffix   |
|-----------|--------|--------------------|----------|
| EAN 8     | 0C     | Code 39            | 00 0A 0B |
| EAN 13    | 16     | Interleaved 2 of 5 | 00 0D 0B |
| UPC A     | 0D     | Code 128           | 00 18 0B |
| UPC E     | 0A     | Code 39            | 00 0A 0B |

## USB PC or Macintosh Keyboard

Scan one of the following codes to program the scan engine for USB PC Keyboard or USB Macintosh Keyboard. Scanning these codes also adds a CR suffix.

PAP124.  
**USB Keyboard (PC)**

PAP125.  
**USB Keyboard (Mac)**

TRMUSB134.  
**USB Japanese Keyboard (PC)**

## USB HID

Scan the following code to program the scan engine for USB HID bar code scanners.

PAP131.  
**USB HID Bar Code Scanner**

---

## USB Serial

Scan the following code to program the scan engine to emulate a regular RS232-based COM Port. If you are using a Microsoft® Windows® PC, you will need to download a driver from the Honeywell website ([www.honeywellaidc.com](http://www.honeywellaidc.com)). The driver will use the next available COM Port number. Apple® Macintosh computers recognize the scan engine as a USB CDC class device and automatically use a class driver.

TERMID130.

USB Serial

*Note: No extra configuration (e.g., baud rate) is necessary.*

## ACK/NAK Mode

USBACK1.

ACK/NAK Mode On

USBACK0.

\* ACK/NAK Mode Off

## Verifone® Ruby Terminal Default Settings

Scan the following Plug and Play code to program the scan engine for a Verifone Ruby terminal. This bar code sets the baud rate to 1200 bps and the data format to 8 data bits, no parity bit, 1 stop bit. It also adds a line feed (LF) suffix and programs the following prefixes for each symbology:

| Symbology | Prefix |
|-----------|--------|
| UPC-A     | A      |
| UPC-E     | A      |
| EAN-8     | FF     |
| EAN-13    | F      |

PAPERBY.

Verifone Ruby Settings

## **Gilbarco® Terminal Default Settings**

Scan the following Plug and Play code to program the scan engine for a Gilbarco terminal. This bar code sets the baud rate to 2400 bps and the data format to 7 data bits, even parity, 2 stop bits. It also adds a carriage return (CR) suffix and programs the following prefixes for each symbology:

| Symbology | Prefix |
|-----------|--------|
| UPC-A     | A      |
| UPC-E     | E0     |
| EAN-8     | FF     |
| EAN-13    | F      |

PAPGLB.  
Gilbarco Settings

## **Honeywell Bioptic Aux Port Configuration**

Scan the following Plug and Play code to program the scan engine for a Honeywell bioptic scanner auxiliary port configuration. This bar code sets the baud rate to 38400 bps and the data format to 8 data bits, no parity, 1 stop bit.

PAPBIO.  
Honeywell Bioptic Settings

## **Datalogic™ Magellan® Aux Port Configuration**

Scan the following Plug and Play code to program the scan engine for a Datalogic Magellan auxiliary port configuration. This bar code sets the baud rate to 9600 bps and the data format to 8 data bits, no parity, 1 stop bit.

PAPMAG.  
Datalogic Magellan Bioptic Settings

## **NCR Bioptic Aux Port Configuration**

Scan the following Plug and Play code to program the scan engine for an NCR bioptic scanner auxiliary port configuration. The following prefixes are programmed for each symbology:

| Symbology | Prefix | Symbology                            | Prefix |
|-----------|--------|--------------------------------------|--------|
| UPC-A     | A      | Interleaved 2 of 5                   | b      |
| UPC-E     | E0     | Code 128                             | f      |
| EAN-8     | FF     | GS1 DataBar<br>Omnidirectional       | r      |
| EAN-13    | F      | GS1 DataBar<br>Expanded              | r      |
| Code 39   | a      | Codabar                              | N      |
|           |        | Code 32<br>Pharmaceutical<br>(PARAF) | a      |

PAPNCR.  
NCR Bioptic Settings

### ***Wincor Nixdorf Terminal Default Settings***

Scan the following Plug and Play code to program the scan engine for a Wincor Nixdorf terminal. This bar code sets the baud rate to 9600 bps and the data format to 8 data bits, no parity, 1 stop bit.

PAPWNX.  
Wincor Nixdorf Terminal Settings

### ***Wincor Nixdorf Beetle™ Terminal Default Settings***

Scan the following Plug and Play code to program the scanner for a Wincor Nixdorf Beetle terminal. The following prefixes are programmed for each symbology:

| Symbology   | Prefix | Symbology            | Prefix |
|-------------|--------|----------------------|--------|
| Aztec Code  | V      | Interleaved 2 of 5   | I      |
| Codabar     | N      | MaxiCode             | T      |
| Code 93     | L      | MicroPDF417          | S      |
| Code 128    | K      | PDF417               | Q      |
| Data Matrix | R      | QR Code              | U      |
| EAN-8       | B      | Straight 2 of 5 IATA | H      |
| EAN-13      | A      | UPC-A                | A0     |
| GS1 DataBar | E      | UPC-E                | C      |
| GS1-128     | P      | All other bar codes  | M      |

PAPBTL.  
Wincor Nixdorf Beetle Settings

---

## **Wincor Nixdorf RS232 Mode A**

Scan the following Plug and Play code to program the scanner for a Wincor Nixdorf RS232 Mode A terminal. This bar code sets the baud rate to 9600 bps and the data format to 8 data bits, odd parity, 1 stop bit. The following prefixes are programmed for each symbology:

| <b>Symbology</b>    | <b>Prefix</b> | <b>Symbology</b>     | <b>Prefix</b> |
|---------------------|---------------|----------------------|---------------|
| Code 128            | K             | EAN-13               | A             |
| Code 93             | L             | GS1-128              | K             |
| Codabar             | N             | Interleaved 2 of 5   | I             |
| UPC-A               | A0            | Plessey              | O             |
| UPC-E               | C             | Straight 2 of 5 IATA | H             |
| EAN-8               | B             | GS1 DataBar          | E             |
| All other bar codes | M             |                      |               |

## Keyboard Style

This program's keyboard styles, such as Caps Lock and Shift Lock. If you have used [Keyboard Conversion](#) settings, they will override any of the following Keyboard Style settings. *Default = Regular.*

**Regular** is used when you normally have the Caps Lock key off.

KBDSTY0.  
\* Regular

**Caps Lock** is used when you normally have the Caps Lock key on.

KBDSTY1.  
Caps Lock

---

**Shift Lock** is used when you normally have the Shift Lock key on (not common to U.S. keyboards).

**Automatic Caps Lock** is used if you change the Caps Lock key on and off. The software tracks and reflects if you have Caps Lock on or off. This selection can only be used with systems that have an LED that notes the Caps Lock status (AT keyboards).

**Autocaps via NumLock** bar code should be scanned in countries (e.g., Germany, France) where the Caps Lock key cannot be used to toggle Caps Lock. The NumLock option works similarly to the regular Autocaps, but uses the NumLock key to retrieve the current state of the Caps Lock.

**Emulate External Keyboard** should be scanned if you do not have an external keyboard (IBM AT or equivalent).

*Note: After scanning the Emulate External Keyboard bar code, you must power cycle your computer.*

## **Keyboard Conversion**

Alphabetic keyboard characters can be forced to be all upper case or all lowercase. So if you have the following bar code: "abc569GK," you can make the output "ABC569GK" by scanning **Convert All Characters to Upper Case**, or to "abc569gk" by scanning **Convert All Characters to Lower Case**.

These settings override [Keyboard Style](#) selections.

*Note: If your interface is a keyboard wedge, first scan the menu code for [Automatic Caps Lock](#) (page 2-15). Otherwise, your output may not be as expected.*

*Default = Keyboard Conversion Off.*

---

## Control Character Output

This selection sends a text string instead of a control character. For example, when the control character for a carriage return is expected, the output would display [CR] instead of the ASCII code of 0D. Refer to [ASCII Conversion Chart \(Code Page 1252\)](#) on page A-3. Only codes 00 through 1F are converted (the first column of the chart).

*Note: Control + X (Control + ASCII) Mode overrides this mode.*

*Default = Off.*

KBDNPE1.

**Control Character Output On**

KBDNPE0.

**\* Control Character Output Off**

## Keyboard Modifiers

This modifies special keyboard features, such as CTRL+ ASCII codes and Turbo Mode.

**Control + X (Control + ASCII) Mode On:** The scan engine sends key combinations for ASCII control characters for values 00-1F. Windows is the preferred mode. All keyboard country codes are supported. DOS mode is a legacy mode, and it does not support all keyboard country codes. New users should use the Windows mode. Refer to [Keyboard Function Relationships](#), page 8-1 for CTRL+ X Values.

**Windows Mode Prefix/Suffix Off:** The scan engine sends key combinations for ASCII control characters for values 00-1F, but it does not translate any prefix or suffix information.

*Default = Control + X Mode Off.*

KBDCAS2.

**Windows Mode Control + X Mode On**

KBDCAS0.

**\* Control + X Mode Off**

KBDCAS1.

**DOS Mode Control + X Mode On**

KBDCAS3.

**Windows Mode Prefix/Suffix Off**

**Turbo Mode:** The scan engine sends characters to a terminal faster. If the terminal drops characters, do not use Turbo Mode.

*Default = Off*

KBDTMD1.

**Turbo Mode On**

KBDTMD0.  
\* Turbo Mode Off

**Numeric Keypad Mode:** Sends numeric characters as if entered from a numeric keypad. *Default = Off*

KBDNPS1.  
Numeric Keypad Mode On

KBDNPS0.  
\* Numeric Keypad Mode Off

**Automatic Direct Connect Mode:** This selection can be used if you have an IBM AT style terminal and the system is dropping characters. *Default = Off*

KBDADC1.  
Automatic Direct Connect Mode  
On

KBDADC0.  
\* Automatic Direct Connect  
Mode Off

## **RS232 Modifiers**

### **RS232 Baud Rate**

Baud Rate sends the data from the scan engine to the terminal at the specified rate. The host terminal must be set for the same baud rate as the scan engine. *Default = 115200.*

232BAD0.  
300

232BAD1.  
600

232BAD2.  
1200

### **RS232 Word Length: Data Bits, Stop Bits, and Parity**

**Data Bits** sets the word length at 7 or 8 bits of data per character. If an application requires only ASCII Hex characters 0 through 7F decimal (text, digits, and punctuation), select 7 data bits. For applications that require use of the full ASCII set, select 8 data bits per character. *Default = 8.*

**Stop Bits** sets the stop bits at 1 or 2. *Default = 1.*

**Parity** provides a means of checking character bit patterns for validity.  
*Default = None.*

232WRD1.

7 Data, 2 Stop Parity None

232WRD5.

8 Data, 1 Stop, Parity Even

232WRD8.

8 Data, 1 Stop, Parity Odd

232WRD4.

7 Data, 2 Stop, Parity Even

232WRD7.

7 Data, 2 Stop, Parity Odd

232WRD2.

\* 8 Data, 1 Stop, Parity None

232WRD14.

8 Data, 1 Stop, Parity Mark

### **RS232 Receiver Time-Out**

The unit stays awake to receive data until the RS232 Receiver Time-Out expires. A manual or serial trigger resets the time-out. When an RS232 receiver is sleeping, a character may be sent to wake up the receiver and reset the time-out. A transaction on the CTS line will also wake up the receiver. The receiver takes 300 milliseconds to completely come up. Change the RS232 receiver time-out by scanning the bar code below, then scanning digits from the inside back cover of this manual, then scanning **Save**. The range is 0 to 300 seconds. *Default = 0 seconds (no time-out - always on).*

232LPT.

RS232 Receiver Time-Out

### **RS232 Handshaking**

RS232 Handshaking allows control of data transmission from the scan engine using software commands from the host device. When RTS/CTS is turned **Off**, no data flow control is used.

**Flow Control, No Timeout:** The scan engine asserts RTS when it has data to send, and will wait indefinitely for CTS to be asserted by the host.

**Two-Direction Flow Control:** The scan engine asserts RTS when it is OK for the host to transmit. The host asserts CTS when it is OK for the device to transmit.

---

**Flow Control with Timeout:** The scan engine asserts RTS when it has data to send and waits for a delay (see [RS232 Timeout](#) on page 2-20) for CTS to be asserted by the host. If the delay time expires and CTS is not asserted, the device transmit buffer is cleared and scanning may resume.

*Default = RTS/CTS Off.*

232CTS1.

**Flow Control, No Timeout**

232CTS2.

**Two-Direction Flow Control**

232CTS3.

**Flow Control with Timeout**

232CTS0.

**\* RTS/CTS Off**

## **RS232 Timeout**

When using Flow Control with Timeout, you must program the length of the delay you want to wait for CTS from the host. Set the length (in milliseconds) for a timeout by scanning the bar code below, then setting the timeout (from 1-5100 milliseconds) by scanning digits from the inside back cover, then scanning **Save**.

232DEL.

**RS232 Timeout**

## **XON/XOFF**

Standard ASCII control characters can be used to tell the scan engine to start sending data (**XON/XOFF On**) or to stop sending data (**XON/XOFF Off**). When the host sends the XOFF character (DC3, hex 13) to the scan engine, data transmission stops. To resume transmission, the host sends the XON character (DC1, hex 11). Data transmission continues where it left off when XOFF was sent. *Default = XON/XOFF Off.*

232XON1.

**XON/XOFF On**

232XON0.

**\* XON/XOFF Off**

---

## ACK/NAK

After transmitting data, the scan engine waits for an ACK character (hex 06) or a NAK character (hex 15) response from the host. If ACK is received, the communications cycle is completed and the scan engine looks for more bar codes. If NAK is received, the last set of bar code data is retransmitted and the scan engine waits for ACK/NAK again. Turn on the ACK/NAK protocol by scanning the **ACK/NAK On** bar code below. To turn off the protocol, scan **ACK/NAK Off**. *Default = ACK/NAK Off.*

232ACK1.  
**ACK/NAK On**

232ACK0.  
**\* ACK/NAK Off**

## RS232 Stop Mode

Scan the following bar code to force the engine into a stop mode. Restart the engine by using a trigger pull, nWake, or RxD toggle.

232SDY.  
**RS232 Stop Mode On**

## Scanner to Bioptic Communication

The following settings are used to set up communication between Honeywell scan engines and bioptic scanners.

*Note: The scan engine's baud rate must be set to 38400 and the RS232 timeout must be set to 3000 in order to communicate with a bioptic scanner. See "RS232 Baud Rate" on page 2-17, and [RS232 Timeout](#) on page 2-20 for further information.*

### Scanner-Bioptic Packet Mode

**Packet Mode On** must be scanned to set the scan engine's format so it is compatible with a bioptic scanner. *Default = Packet Mode Off.*

232PKT0.  
**\* Packet Mode Off**

232PKT2.  
**Packet Mode On**

---

### **Scanner-Bioptic ACK/NAK Mode**

**Bioptic ACK/Nak On** must be scanned so the scan engine will wait for an ACK or NAK from a bioptic scanner after each packet is sent. The Scanner-Bioptic ACK/NAK Timeout (below) controls how long the scanner will wait for a response.  
*Default = Bioptic ACK/NAK Off.*

232NAK0.  
**\* Bioptic ACK/NAK Off**

232NAK1.  
**Bioptic ACK/NAK On**

### **Scanner-Bioptic ACK/NAK Timeout**

This allows you to set the length (in milliseconds) for a timeout for a bioptic scanner's ACK/NAK response. Scan the bar code below, then set the timeout (from 1-30,000 milliseconds) by scanning digits from the inside back cover, then scanning **Save**. *Default = 5100.*

232DLK.  
**ACK/NAK Timeout**

## Input/Output Settings

### Power Up Beeper

The scan engine can be programmed to beep when it's powered up. Scan the **Off** bar code(s) if you don't want a power up beep. *Default = Power Up Beeper On - Scanner.*

BEPPWR0.  
Power Up Beeper Off -  
Scanner

BEPPWR1.  
\* Power Up Beeper On -  
Scanner

### Beep on BEL Character

You may wish to force the scan engine to beep upon a command sent from the host. If you scan the **Beep on BEL On** bar code below, the scan engine will beep every time a BEL character is received from the host. *Default = Beep on BEL Off.*

BELBEP0.  
\*Beep on BEL Off

BELBEP1.  
Beep on BEL On

### Trigger Click

To hear an audible click every time the scanner trigger is pressed, scan the **Trigger Click On** bar code below. Scan the **Trigger Click Off** code if you don't wish to hear the click. (This feature has no effect on serial or automatic triggering.) *Default = Trigger Click Off.*

BEPTRG0.  
\*Trigger Click Off

BEPTRG1.  
Trigger Click On

---

## Good Read and Error Indicators

### Beeper – Good Read

The beeper may be programmed **On** or **Off** in response to a good read. Turning this option off only turns off the beeper response to a good read indication. All error and menu beeps are still audible. *Default = Beeper - Good Read On.*

BEPBEP0.

Beeper - Good Read Off

BEPBEP1.

\* Beeper - Good Read On

### Beeper Volume – Good Read

The beeper volume codes modify the volume of the beep the scan engine emits on a good read. *Default = High.*

BEPLVL1.

Low

BEPLVL2.

Medium

BEPLVL3.

\* High

BEPLVL0.

Off

### Beeper Pitch – Good Read

The beeper pitch codes modify the pitch (frequency) of the beep the scan engine emits on a good read. *Default = Medium.*

BEPFQ11600.

Low (1600 Hz)

BEPFQ12700.

\* Medium (2700 Hz)

BEPFQ14200.  
High (4200 Hz)

### ***Beeper Pitch – Error***

The beeper pitch codes modify the pitch (frequency) of the sound the scan engine emits when there is a bad read or error. *Default = Razz.*

BEPFQ2250.  
\* Razz (250 Hz)

BEPFQ23250.  
Medium (3250 Hz)

BEPFQ24200.  
High (4200 Hz)

### ***Beeper Duration – Good Read***

The beeper duration codes modify the length of the beep the scan engine emits on a good read. *Default = Normal.*

BEPBIP0.  
\* Normal Beep

BEPBIP1.  
Short Beep

### ***LED – Good Read***

The LED indicator can be programmed **On** or **Off** in response to a good read. *Default = On.*

BEPLED1.  
\* LED - Good Read On

BEPLED0.  
LED - Good Read Off

---

### Number of Beeps – Good Read

The number of beeps of a good read can be programmed from 1 - 9. The same number of beeps will be applied to the beeper and LED in response to a good read. For example, if you program this option to have five beeps, there will be five beeps and five LED flashes in response to a good read. The beeps and LED flashes are in sync with one another. To change the number of beeps, scan the bar code below and then scan a digit (1-9) bar code and the **Save** bar code on the [Programming Chart](#) inside the back cover of this manual. *Default = 1.*

BEPRPT.

Number of Good Read Beeps/LED Flashes

### Number of Beeps – Error

The number of beeps and LED flashes emitted by the scan engine for a bad read or error can be programmed from 1 - 9. For example, if you program this option to have five error beeps, there will be five error beeps and five LED flashes in response to an error. To change the number of error beeps, scan the bar code below and then scan a digit (1-9) bar code and the **Save** bar code on the [Programming Chart](#) inside the back cover of this manual. *Default = 1.*

BEPERR.

Number of Error Beeps/LED Flashes

### Good Read Delay

This sets the minimum amount of time before the scan engine can read another bar code. *Default = 0 ms (No Delay).*

DLYGRD0.

\* No Delay

DLYGRD500.

Short Delay (500 ms)

DLYGRD1000.

Medium Delay (1,000 ms)

DLYGRD1500.

Long Delay (1,500 ms)

### User-Specified Good Read Delay

If you want to set your own length for the good read delay, scan the bar code below, then set the delay (from 0-30,000 milliseconds) by scanning digits from the inside back cover, then scanning **Save**.

DLYGRD.

User-Specified Good Read Delay

---

## Manual Trigger Mode

When in manual trigger mode, the scanner scans until a bar code is read, or until the trigger is released.

Manual Trigger - Normal

### LED Illumination - Manual Trigger

If you wish to set the illumination LED brightness, scan one of the bar codes below. This sets the LED illumination for the scan engine when the trigger is pressed. *Default = High.*

*Note: The LEDs are like a flash on a camera. The lower the ambient light in the room, the brighter the LEDs need to be so the scan engine can “see” the bar codes.*

Low

Medium

\* High

## Serial Trigger Mode

You can activate the scan engine either by pressing the trigger, or using a serial trigger command (see [Trigger Commands](#) on page 10-3). When in serial mode, the scan engine scans until a bar code has been read or until the deactivate command is sent. The scan engine can also be set to turn itself off after a specified time has elapsed (see [Read Time-Out](#), which follows).

### Read Time-Out

Use this selection to set a time-out (in milliseconds) of the scan engine’s trigger when using serial commands to trigger the scan engine. Once the scan engine has timed out, you can activate the scan engine either by pressing the trigger or using a serial trigger command. After scanning the **Read Time-Out** bar code, set the time-out duration (from 0-300,000 milliseconds) by scanning digits on the [Programming Chart](#) inside the back cover, then scanning **Save**. *Default = 30,000 ms.*

Read Time-Out

## Presentation Mode

Presentation Mode uses ambient light to detect bar codes. The LED dims until a bar code is presented to the scanner, then the LED brightens to read the code. If the light level in the room is not high enough, Presentation Mode may not work properly.

---

Scan the following bar code to program your scanner for Presentation Mode.

### **Idle Illumination - Presentation Mode**

Scan one of the bar codes below to set the LED illumination for the scanner when it is in an idle state in Presentation Mode. *Default = High.*

*Note: If you use one of the lower Idle Illumination settings, and there is not enough ambient light, the scanner may have difficulty detecting when a bar code is presented to it. If the scanner has difficulty "waking up" to read bar codes, you may need to set the Idle Illumination to a brighter setting.*

*Note: LED Illumination - Presentation Mode does not apply to [Poor Quality PDF Codes](#) or [Mobile Phone Read Mode](#).*

### **Presentation Sensitivity**

Presentation Sensitivity is a numeric range that increases or decreases the scan engine's reaction time to bar code presentation. To set the sensitivity, scan the **Sensitivity** bar code, then scan the degree of sensitivity (from 0-20) from the inside back cover, and **Save**. 0 is the most sensitive setting, and 20 is the least sensitive. *Default = 1.*

### **Presentation Centering**

Use Presentation Centering to narrow the scanner's field of view when it is in the stand to make sure the scanner reads only those bar codes intended by the user. For instance, if multiple codes are placed closely together, Presentation Centering will insure that only the desired codes are read.

*Note: To adjust centering when the scanner is hand-held, see [Centering](#) (page 3-14).*

If a bar code is not touched by a predefined window, it will not be decoded or output by the scanner. If Presentation Centering is turned on by scanning **Presentation Centering On**, the scanner only reads codes that pass through the centering window you specify using the **Top of Presentation Centering Window**, **Bottom of Presentation Centering Window**, **Left**, and **Right of Presentation Centering Window** bar codes.

In the example below, the white box is the centering window. The centering window has been set to 20% left, 30% right, 8% top, and 25% bottom. Since Bar Code 1 passes through the centering window, it will be read. Bar Code 2 does not pass through the centering window, so it will not be read.

*Note: A bar code needs only to be touched by the centering window in order to be read. It does not need to pass completely through the centering window.*

---

Scan **Presentation Centering On**, then scan one of the following bar codes to change the top, bottom, left, or right of the centering window. Then scan the percent you want to shift the centering window using digits on the inside back cover of this manual. Scan **Save**. *Default Presentation Centering = 40% for Top and Left, 60% for Bottom and Right.*

PDCWIN1.  
**Presentation Centering On**

PDCTOP.  
**Top of Presentation Centering Window**

PDCLFT.  
**Left of Presentation Centering Window**

PDCWIND.  
**\* Presentation Centering Off**

PDCBOT.  
**Bottom of Presentation Centering Window**

PDCRGT.  
**Right of Presentation Centering Window**

*Note: If you are taking images (see [Imaging Commands](#) beginning on page 7-1), you must set the In-Stand Sensor to **Off**.*

You may program a Streaming Presentation Mode (Normal, Enhanced, or Mobile Phone) you wish to use for in-stand scanning, and a Manual Trigger mode (Normal, Enhanced, or Mobile Phone) you wish to use for out-of-stand scanning. To do this, you must first scan the preferred Streaming Presentation mode (see below), then scan the Manual Trigger mode (see [page 3-5](#) and [page 3-10](#)) you want to use.

## **Poor Quality Codes**

### **Poor Quality 1D Codes**

This setting improves the scanner's ability to read damaged or badly printed linear bar codes. When **Poor Quality 1D Reading On** is scanned, poor quality linear bar code reading is improved, but the scanner's snappiness is decreased, making it less aggressive when reading good quality bar codes. This setting does not affect 2D bar code reading. *Default = Poor Quality 1D Reading Off.*

DECLDI1.  
**Poor Quality 1D Reading On**

\* Poor Quality 1D Reading Off

### ***Poor Quality PDF Codes***

This setting improves the scanner's ability to read damaged or badly printed PDF codes by combining information from multiple images. When **Poor Quality PDF On** is scanned, poor quality PDF code reading is improved, but the scanner's snap-piness is decreased, making it less aggressive when reading good quality bar codes. This setting does not affect 1D bar code reading. *Default = Poor Quality PDF Reading Off.*

**Poor Quality PDF Reading On**

\* Poor Quality PDF Reading Off

### ***CodeGate®***

When CodeGate is **On**, the trigger is used to allow decoded data to be transmitted to the host system. The scanner remains on, scanning and decoding bar codes, but the bar code data is not transmitted until the trigger is pressed. When CodeGate is **Off**, bar code data is transmitted when it is decoded. *Default = CodeGate Off Out-of-Stand.*

**\* CodeGate Off  
Out-of-Stand**

**CodeGate On  
Out-of-Stand**

---

## Mobile Phone Read Mode

When this mode is selected, your scanner is optimized to read bar codes from mobile phone or other LED displays. However, the speed of scanning printed bar codes may be slightly lower when this mode is enabled.

**Hand Held Scanning - Mobile Phone**

**Presentation Scanning - Mobile Phone**

*Note: To turn off Mobile Phone Read Mode, scan a Manual or Serial Trigger Mode bar code (see page 3-5).*

## Hands Free Time-Out

The Scan Stand and Presentation Modes are referred to as “hands free” modes. If the scanner’s trigger is pulled when using a hands free mode, the scanner changes to manual trigger mode. You can set the time the scanner should remain in manual trigger mode by setting the Hands Free Time-Out. Once the time-out value is reached, (if there have been no further trigger pulls) the scanner reverts to the original hands free mode.

Scan the **Hands Free Time-Out** bar code, then scan the time-out duration (from 0-300,000 milliseconds) from the inside back cover, and **Save**. *Default = 5,000 ms.*

**Hands Free Time-Out**

## Reread Delay

This sets the time period before the scan engine can read the *same* bar code a second time. Setting a reread delay protects against accidental rereads of the same bar code. Longer delays are effective in minimizing accidental rereads. Use shorter delays in applications where repetitive bar code scanning is required. Reread Delay only works when in a [Presentation Mode](#) (see page 3-5). *Default = Medium.*

**Short (500 ms)**

**\* Medium (750 ms)**

**Long (1000 ms)**

**Extra Long (2000 ms)**

---

## User-Specified Reread Delay

If you want to set your own length for the reread delay, scan the bar code below, then set the delay (from 0-30,000 milliseconds) by scanning digits from the inside back cover, then scanning **Save**.

DLYRRD.

User-Specified Reread Delay

## 2D Reread Delay

Sometimes 2D bar codes can take longer to read than other bar codes. If you wish to set a separate Reread Delay for 2D bar codes, scan one of the programming codes that follows. **2D Reread Delay Off** indicates that the time set for [Reread Delay](#) is used for both 1D and 2D bar codes. *Default = 2D Reread Delay Off.*

DLY2RR0.

\* 2D Reread Delay Off

DLY2RR1000.

Short (1000ms)

DLY2RR2000.

Medium (2000ms)

DLY2RR3000.

Long (3000ms)

DLY2RR4000.

Extra Long (4000ms)

## Character Activation Mode

You may use a character sent from the host to trigger the scanner to begin scanning. When the activation character is received, the scanner continues scanning until either the [Character Activation Timeout](#) (page 3-12), the deactivation character is received (see [Deactivation Character](#) on page 3-13), or a bar code is transmitted. Scan the following **On** bar code to use character activation, then use Activation Character (following) to select the character you will send from the host to start scanning. *Default = Off.*

HSTCEND.

\* Off

HSTCEN1.

On

### **Activation Character**

This sets the character used to trigger scanning when using Character Activation Mode. On the [ASCII Conversion Chart \(Code Page 1252\)](#), page A-3, find the hex value that represents the character you want to use to trigger scanning. Scan the following bar code, then use the [Programming Chart](#) to read the alphanumeric combination that represents that ASCII character. Scan **Save** to finish. *Default = 12 [DC2]*.

HSTACH.

Activation Character

### **End Character Activation After Good Read**

After a bar code is successfully detected and read from the scanner, the illumination can be programmed either to remain on and scanning, or to turn off. When **End Character Activation After Good Read** is enabled, the illumination turns off and stops scanning after a good read. If you scan **Do Not End Character Activation After Good Read**, the illumination remains on after a good read. *Default = Do Not End Character Activation After Good Read.*

HSTCGD0.

\* Do Not End Character  
Activation After Good Read

HSTCGD1.

End Character Activation After  
Good Read

### **Character Activation Timeout**

You can set a timeout for the length of time the illumination remains on and attempting to decode bar codes when using Character Activation Mode. Set the length (in milliseconds) for a timeout by scanning the following bar code, then setting the timeout (from 1-300,000 milliseconds) by scanning digits from the [Programming Chart](#) inside the back cover of this manual, then scanning **Save**. *Default = 30,000 ms.*

HSTCDT.

Character Activation Timeout

---

## Character Deactivation Mode

If you have sent a character from the host to trigger the scanner to begin scanning, you can also send a deactivation character to stop scanning. Scan the following **On** bar code to use character deactivation, then use Deactivation Character (following) to select the character you will send from the host to terminate scanning. *Default = Off.*

## Deactivation Character

This sets the character used to terminate scanning when using Character Deactivation Mode. On the [ASCII Conversion Chart \(Code Page 1252\)](#), page A-3, find the hex value that represents the character you want to use to terminate scanning. Scan the following bar code, then use the [Programming Chart](#) inside the back cover of this manual to read the alphanumeric combination that represents that ASCII character. Scan **Save** to finish. *Default = 14 [DC4].*

## Illumination Lights

If you want the illumination lights on while reading a bar code, scan the **Lights On** bar code, below. However, if you want to turn just the lights off, scan the **Lights Off** bar code. *Default = Lights On.*

*Note: This setting does not affect the aimer light. The aiming light can be set using [Aimer Mode](#) (page 3-14).*

## Aimer Delay

The aimer delay allows a delay time for the operator to aim the scan engine before the picture is taken. Use these codes to set the time between when the trigger is pulled and when the picture is taken. During the delay time, the aiming light will appear, but the LEDs won't turn on until the delay time is over. *Default = Off.*

SCNDLY400.  
400 milliseconds

SCNDLY0.  
\* Off (no delay)

### ***User-Specified Aimer Delay***

If you want to set your own length for the duration of the delay, scan the bar code below, then set the time-out by scanning digits (0 - 4,000 ms) from the [Programming Chart](#) inside the back cover of this manual, then scan **Save**.

SCNDLY.  
Delay Duration

### ***Aimer Mode***

This feature allows you to turn the aimer on and off. When the Interlaced bar code is scanned, the aimer is interlaced with the illumination LEDs. *Default = Interlaced.*

SCNAIM0.  
Off

SCNAIM2.  
\* Interlaced

### ***Centering***

Use Centering to narrow the scan engine's field of view to make sure that when the scanner is hand-held, it reads only those bar codes intended by the user. For instance, if multiple codes are placed closely together, centering will insure that only the desired codes are read. (Centering can be used in conjunction with [Aimer Delay](#), page 3-13, for the most error-free operation in applications where multiple codes are spaced closely together. Using the Aimer Delay and Centering features, the scanner can emulate the operation of older systems, such as linear laser bar code scanners.)

If a bar code is not touched by a predefined window, it will not be decoded or output by the scan engine. If centering is turned on by scanning **Centering On**, the scan engine only reads codes that pass through the centering window you specify using the **Top of Centering Window** and **Bottom of Centering Window** bar codes.

In the example below, the white box is the centering window. The centering window has been set to 8% top and 25% bottom. Since Bar Code 1 passes through the centering window, it will be read. Bar Code 2 does not pass through the centering window, so it will not be read.

A bar code needs only to be touched by the centering window in order to be read. It does not need to pass completely through the centering window.

Scan **Centering On**, then scan one of the following bar codes to change the top and bottom of the centering window. Then scan the percent you want to shift the centering window using digits on the inside back cover of this manual. Scan **Save**.

Default Centering = 40% for Top, 60% for Bottom.

---

## No Read

With No Read turned **On**, the scan engine notifies you if a code cannot be read. If using an EZConfig-Scanning Tool Scan Data Window (see page 9-3), an “NR” appears when a code cannot be read. If No Read is turned **Off**, the “NR” will not appear.

*Default = Off.*

If you want a different notation than “NR,” for example, “Error,” or “Bad Code,” you can edit the output message (see [Data Formatting](#) beginning on page 5-1). The hex code for the No Read symbol is 9C.

## Video Reverse

Video Reverse is used to allow the scan engine to read bar codes that are inverted. The **Video Reverse Off** bar code below is an example of this type of bar code. Scan **Video Reverse Only** to read *only* inverted bar codes. Scan **Video Reverse and Standard Bar Codes** to read both types of codes.

*Note: After scanning **Video Reverse Only**, menu bar codes cannot be read. You must scan **Video Reverse Off** or **Video Reverse and Standard Bar Codes** in order to read menu bar codes.*

*Note: Images downloaded from the unit are not reversed. This is a setting for decoding only.*

**\* Video Reverse Off**

---

## Working Orientation

Some bar codes are direction-sensitive. For example, KIX codes and OCR can misread when scanned sideways or upside down. Use the working orientation settings if your direction-sensitive codes will not usually be presented upright to the scanner. *Default = Upright.*

## Prefix/Suffix Overview

When a bar code is scanned, additional information is sent to the host computer along with the bar code data. This group of bar code data and additional, user-defined data is called a “message string.” The selections in this section are used to build the user-defined data into the message string.

Prefix and Suffix characters are data characters that can be sent before and after scanned data. You can specify if they should be sent with all symbologies, or only with specific symbologies. The following illustration shows the breakdown of a message string:

### Points to Keep In Mind

- It is not necessary to build a message string. The selections in this chapter are only used if you wish to alter the default settings. *Default prefix = None. Default suffix = None.*
- A prefix or suffix may be added or cleared from one symbology or all symbologies.
- You can add any prefix or suffix from the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3, plus Code I.D. and AIM I.D.
- You can string together several entries for several symbologies at one time.
- Enter prefixes and suffixes in the order in which you want them to appear on the output.
- When setting up for specific symbologies (as opposed to all symbologies), the specific symbology ID value counts as an added prefix or suffix character.
- The maximum size of a prefix or suffix configuration is 200 characters, which includes header information.

### To Add a Prefix or Suffix:

**Step 1.** Scan the **Add Prefix** or **Add Suffix** symbol ([page 4-2](#)).

**Step 2.** Determine the 2 digit Hex value from the Symbology Chart (included in the [Symbology Charts](#), beginning on page A-1) for the symbology to which you want to apply the prefix or suffix. For example, for Code 128, Code ID is “j” and Hex ID is “6A”.

**Step 3.** Scan the 2 hex digits from the [Programming Chart](#) inside the back cover of this manual or scan **9, 9** for all symbologies.

**Step 4.** Determine the hex value from the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3, for the prefix or suffix you wish to enter.

*Note:* To add the Code I.D., scan **5, C, 8, 0**.

To add AIM I.D., scan **5, C, 8, 1**.

To add a backslash (\), scan **5, C, 5, C**.

To add a backslash (\) as in Step 7, you must scan 5C twice – once to create the leading backslash and then to create the backslash itself.

**Step 5.** Scan the 2 digit hex value from the [Programming Chart](#) inside the back cover of this manual.

**Step 6.** Repeat Steps 4 and 5 for every prefix or suffix character.

**Step 7.** Scan **Save** to exit and save, or scan **Discard** to exit without saving.

Repeat Steps 1-6 to add a prefix or suffix for another symbology.

---

### **Example: Add a Tab Suffix to All Symbologies**

**Step 1.** Scan **Add Suffix**.

**Step 2.** Scan **9, 9** from the [Programming Chart](#) inside the back cover of this manual to apply this suffix to all symbologies.

**Step 3.** Scan **0, 9** from the [Programming Chart](#) inside the back cover of this manual. This corresponds with the hex value for a horizontal tab, shown in the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3.

Scan **Save**, or scan **Discard** to exit without saving.

### **To Clear One or All Prefixes or Suffixes**

You can clear a single prefix or suffix, or clear all prefixes/suffixes for a symbology. If you have been entering prefixes and suffixes for single symbologies, you can use **Clear One Prefix (Suffix)** to delete a specific character from a symbology. When you **Clear All Prefixes (Suffixes)**, all the prefixes or suffixes for a symbology are deleted.

**Step 1.** Scan the **Clear One Prefix** or **Clear One Suffix** symbol.

**Step 2.** Determine the 2 digit Hex value from the Symbology Chart (included in the [Symbology Charts](#), beginning on page A-1) for the symbology from which you want to clear the prefix or suffix.

**Step 3.** Scan the 2 digit hex value from the [Programming Chart](#) inside the back cover of this manual or scan **9, 9** for all symbologies.

Your change is automatically saved.

### **To Add a Carriage Return Suffix to All Symbologies**

Scan the following bar code if you wish to add a carriage return suffix to all symbologies at once. This action first clears all current suffixes, then programs a carriage return suffix for all symbologies.

VSUFCR.  
Add CR Suffix  
All Symbologies

### **Prefix Selections**

PREBK2.  
Add Prefix

PRECL2.  
Clear One Prefix

PRECA2.  
Clear All Prefixes

### **Suffix Selections**

SUFBK2.  
Add Suffix

## Function Code Transmit

When this selection is enabled and function codes are contained within the scanned data, the scan engine transmits the function code to the terminal. Charts of these function codes are provided in [Supported Interface Keys](#) starting on [page 8-3](#). When the scanner is in keyboard wedge mode, the scan code is converted to a key code before it is transmitted. *Default = Enable*.

## Intercharacter, Interfunction, and Intermessage Delays

Some terminals drop information (characters) if data comes through too quickly. Intercharacter, interfunction, and intermessage delays slow the transmission of data, increasing data integrity.

### Intercharacter Delay

An intercharacter delay of up to 5000 milliseconds (in 5ms increments) may be placed between the transmission of each character of scanned data. Scan the **Intercharacter Delay** bar code below, then scan the number of 5ms delays, and the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

To remove this delay, scan the **Intercharacter Delay** bar code, then set the number of delays to 0. Scan the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

*Note: Intercharacter delays are not supported in USB serial emulation.*

### User Specified Intercharacter Delay

An intercharacter delay of up to 5000 milliseconds (in 5ms increments) may be placed after the transmission of a particular character of scanned data. Scan the **Delay Length** bar code below, then scan the number of 5ms delays, and the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

Next, scan the **Character to Trigger Delay** bar code, then the 2-digit hex value for the ASCII character that will trigger the delay [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3.

To remove this delay, scan the **Delay Length** bar code, and set the number of delays to 0. Scan the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

### Interfunction Delay

An interfunction delay of up to 5000 milliseconds (in 5ms increments) may be placed between the transmission of each control character in the message string. Scan the **Interfunction Delay** bar code below, then scan the number of 5ms delays, and the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

To remove this delay, scan the **Interfunction Delay** bar code, then set the number of delays to 0. Scan the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

### Intermessage Delay

An intermessage delay of up to 5000 milliseconds (in 5ms increments) may be placed between each scan transmission. Scan the **Intermessage Delay** bar code below, then scan the number of 5ms delays, and the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

To remove this delay, scan the **Intermessage Delay** bar code, then set the number of delays to 0. Scan the **Save** bar code using the [Programming Chart](#) inside the back cover of this manual.

## Data Formatting

### Data Format Editor Introduction

You may use the Data Format Editor to change the scan engine's output. For example, you can use the Data Format Editor to insert characters at certain points in bar code data as it is scanned. The selections in the following pages are used only if you wish to alter the output. *Default Data Format setting = None.*

Normally, when you scan a bar code, it is output automatically. However, when you create a format, you must use a "send" command (see [Send Commands](#) on page 5-3) within the format program to output data.

Multiple formats may be programmed into the scan engine. They are stacked in the order in which they are entered. However, the following list presents the order in which formats are applied:

1. Specific Terminal ID, Actual Code ID, Actual Length
2. Specific Terminal ID, Actual Code ID, Universal Length
3. Specific Terminal ID, Universal Code ID, Actual Length
4. Specific Terminal ID, Universal Code ID, Universal Length
5. Universal Terminal ID, Actual Code ID, Actual Length
6. Universal Terminal ID, Actual Code ID, Universal Length
7. Universal Terminal ID, Universal Code ID, Actual Length
8. Universal Terminal ID, Universal Code ID, Universal Length

The maximum size of a data format configuration is 2000 bytes, which includes header information.

If a bar code is read that fails the first data format, the next data format, if there is one, will be used on the bar code data. If there is no other data format, the raw data is output.

If you have changed data format settings, and wish to clear all formats and return to the factory defaults, scan the **Default Data Format** code below.

### Add a Data Format

**Step 1.** Scan the **Enter Data Format** symbol ([page 5-2](#)).

**Step 2.** Select **Primary/Alternate Format**

Determine if this will be your primary data format, or one of 3 alternate formats. This allows you to save a total of 4 different data formats. To program your primary format, scan **0** using the [Programming Chart](#) inside the back cover of this manual. If you are programming an alternate format, scan **1**, **2**, or **3**, depending on which alternate format you are programming. (See "Primary/Alternate Data Formats" on page 5-13 for further information.)

**Step 3. Terminal Type**

Refer to [Terminal ID Table](#) (page 5-3) and locate the Terminal ID number for your PC. Scan three numeric bar codes on the inside back cover to program the scan engine for your terminal ID (you must enter 3 digits). For example, scan **0 0 3** for an AT wedge.

*Note: 099 indicates all terminal types.*

**Step 4. Code I.D.**

In the [Symbology Charts](#), beginning on page A-1, find the symbology to which you want to apply the data format. Locate the Hex value for that symbology and scan the 2 digit hex value from the [Programming Chart](#) inside the back cover of this manual.

If you wish to create a data format for all symbologies, with the exception of some specific symbologies, refer to B8 ([page 5-11](#)).

If you are creating a data format for Batch Mode Quantity, use 35 for the Code I.D.

*Note: 99 indicates all symbologies.*

---

**Step 5. Length**

Specify what length (up to 9999 characters) of data will be acceptable for this symbology. Scan the four digit data length from the [Programming Chart](#) inside the back cover of this manual. For example, 50 characters is entered as 0050.

*Note: 9999 indicates all lengths.*

**Step 6. Editor Commands**

Refer to [Data Format Editor Commands](#) (page 5-3). Scan the symbols that represent the command you want to enter.

**Step 7.** Scan **Save** to save your data format, or **Discard** to exit without saving your changes.

DFMBK3.

**Enter Data Format**

MNUSAV.

**Save**

MNUABT.

**Discard**

### ***Other Programming Selections***

**Clear One Data Format**

This deletes one data format for one symbology. If you are clearing the primary format, scan **0** from the [Programming Chart](#) inside the back cover of this manual. If you are clearing an alternate format, scan **1**, **2**, or **3**, depending on the format you are clearing. Scan the Terminal Type and Code I.D. (see [Symbology Charts](#) on page A-1), and the bar code data length for the specific data format that you want to delete. All other formats remain unaffected.

**Clear all Data Formats**

This clears all data formats.

**Save** to exit and save your data format changes.

**Discard** to exit without saving any data format changes.

DFMCL3.

**Clear One Data Format**

DFMCA3.

**Clear All Data Formats**

MNUSAV.

**Save**

MNUABT.

**Discard**

---

## Terminal ID Table

| Terminal | Model(s)                     | Terminal ID |
|----------|------------------------------|-------------|
| USB      | PC keyboard (HID)            | 124         |
|          | Mac Keyboard                 | 125         |
|          | PC Keyboard (Japanese)       | 134         |
|          | Serial (COM driver required) | 130         |
|          | HID POS                      | 131         |
|          | USB SurePOS Handheld         | 128         |
|          | USB SurePOS Tabletop         | 129         |
| Serial   | RS232 TTL                    | 000         |
|          | RS232 True                   | 000         |
|          | RS485 (IBM-HHBCR 1+2, 46xx)  | 051         |
| Keyboard | PS2 compatibles              | 003         |
|          | AT compatibles               | 002         |

## Data Format Editor Commands

When working with the Data Format Editor, a virtual cursor is moved along your input data string. The following commands are used to both move this cursor to different positions, and to select, replace, and insert data into the final output.

### Send Commands

#### Send all characters

- F1 Include in the output message all of the characters from the input message, starting from current cursor position, followed by an insert character. *Syntax = F1xx* where xx stands for the insert character's hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

#### Send a number of characters

- F2 Include in the output message a number of characters followed by an insert character. Start from the current cursor position and continue for "nn" characters or through the last character in the input message, followed by character "xx." *Syntax = F2nxx* where nn stands for the numeric value (00-99) for the number of characters, and xx stands for the insert character's hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

#### F2 Example: Send a number of characters

Send the first 10 characters from the bar code above, followed by a carriage return. Command string: **F2100D**

F2 is the "Send a number of characters" command

10 is the number of characters to send

0D is the hex value for a CR

The data is output as: **1234567890**

#### F2 and F1 Example: Split characters into 2 lines

Send the first 10 characters from the bar code above, followed by a carriage return, followed by the rest of the characters.

Command string: **F2100DF10D**

F2 is the "Send a number of characters" command

10 is the number of characters to send for the first line

0D is the hex value for a CR

---

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as:

**1234567890**  
**ABCDEFGHIJ**  
<CR>

### ***Send all characters up to a particular character***

- F3 Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the search character "ss," followed by an insert character. The cursor is moved forward to the "ss" character. *Syntax = F3ssxx* where ss stands for the search character's hex value for its ASCII code, and xx stands for the insert character's hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

#### **F3 Example: Send all characters up to a particular character**

Using the bar code above, send all characters up to but not including "D," followed by a carriage return.

Command string: **F3440D**

F3 is the "Send all characters up to a particular character" command

44 is the hex value for a 'D'

0D is the hex value for a CR

The data is output as:

**1234567890ABC**  
<CR>

### ***Send all characters up to a string***

- B9 Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the search string "s...s." The cursor is moved forward to the beginning of the "s...s" string. *Syntax = B9nnns...s* where nnnn stands for the length of the string, and s...s stands for the string to be matched. The string is made up of hex values for the characters in the string. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

#### **B9 Example: Send all characters up to a defined string**

Using the bar code above, send all characters up to but not including "AB."

Command string: **B900024142**

B9 is the "Send all characters up to a string" command

0002 is the length of the string (2 characters)

41 is the hex value for A

42 is the hex value for B

The data is output as: **1234567890**

### ***Send all but the last characters***

- E9 Include in the output message all but the last "nn" characters, starting from the current cursor position. The cursor is moved forward to one position past the last input message character included. *Syntax = E9nn* where nn stands for the numeric value (00-99) for the number of characters that will not be sent at the end of the message.

---

### ***Insert a character multiple times***

- F4 Send “xx” character “nn” times in the output message, leaving the cursor in the current position. *Syntax = F4xxnn* where xx stands for the insert character’s hex value for its ASCII code, and nn is the numeric value (00-99) for the number of times it should be sent. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

**E9 and F4 Example: Send all but the last characters, followed by 2 tabs**

Send all characters except for the last 8 from the bar code above, followed by 2 tabs.

Command string: **E908F40902**

E9 is the “Send all but the last characters” command

08 is the number of characters at the end to ignore

F4 is the “Insert a character multiple times” command

09 is the hex value for a horizontal tab

02 is the number of times the tab character is sent

The data is output as: **1234567890AB <tab><tab>**

### ***Insert a string***

- BA Send “ss” string of “nn” length in the output message, leaving the cursor in the current position. *Syntax = BAnnnns...s* where nnnn stands for the length of the string, and s...s stands for the string. The string is made up of hex values for the characters in the string. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

**B9 and BA Example: Look for the string “AB” and insert 2 asterisks (\*\*)**

Using the bar code above, send all characters up to but not including “AB.” Insert 2 asterisks at that point, and send the rest of the data with a carriage return after.

Command string: **B900024142BA00022A2AF10D**

B9 is the “Send all characters up to a string” command

0002 is the length of the string (2 characters)

41 is the hex value for A

42 is the hex value for B

BA is the “Insert a string” command

0002 is the length of the string to be added (2 characters)

2A is the hex value for an asterisk (\*)

2A is the hex value for an asterisk (\*)

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as:

**1234567890\*\*ABCDEFGHIJ  
<CR>**

### ***Insert symbology name***

- B3 Insert the name of the bar code’s symbology in the output message, without moving the cursor. Only symbologies with a Honeywell ID are included (see [Symbology Charts](#) on page A-1). Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

---

### ***Insert bar code length***

- B4 Insert the bar code's length in the output message, without moving the cursor. The length is expressed as a numeric string and does not include leading zeroes.

#### **B3 and B4 Example: Insert the symbology name and length**

Send the symbology name and length before the bar code data from the bar code above. Break up these insertions with spaces. End with a carriage return.

Command string: **B3F42001B4F42001F10D**

B3 is the "Insert symbology name" command

F4 is the "Insert a character multiple times" command

20 is the hex value for a space

01 is the number of times the space character is sent

B4 is the "Insert bar code length" command

F4 is the "Insert a character multiple times" command

20 is the hex value for a space

01 is the number of times the space character is sent

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as:

**Code128 20 1234567890ABCDEFGHIJ  
<CR>**

### ***Insert key strokes***

- B5 Insert a key stroke or combination of key strokes. Key strokes are dependent on your keyboard (see [Keyboard Key References](#) on page A-10). Any key can be inserted, including arrows and functions. *Syntax = B5xxssnn* where xx is the number of keys pressed (without key modifiers), ss is the key modifier from the table below, and nn is the key number from the [Keyboard Key References](#), page A-10.

| <b>Key Modifiers</b> |    |
|----------------------|----|
| No Key Modifier      | 00 |
| Shift Left           | 01 |
| Shift Right          | 02 |
| Alt Left             | 04 |
| Alt Right            | 08 |
| Control Left         | 10 |
| Control Right        | 20 |

For example, B501021F inserts an "A" on a 104 key, U.S. style keyboard. B5 = the command, 01 = number of keys pressed (without the key modifier), 02 is the key modifier for Shift Right, and 1F is the "a" key. If a lower case "a" were to be inserted, B501001F would be entered.

If there are three keystrokes, the syntax would change from B5xxssnn for one keystroke to B5xxssnnssnnssnn. An example that would insert "abc" is as follows: B503001F00320030F833.

*Note: Key modifiers can be added together when needed. Example: Control Left+Shift Left = 11.*

### ***Move Commands***

#### ***Move the cursor forward a number of characters***

- F5 Move the cursor ahead "nn" characters from current cursor position.  
*Syntax = F5nn* where nn is the numeric value (00-99) for the number of characters the cursor should be moved ahead.

---

**F5 Example: Move the cursor forward and send the data**

Move the cursor forward 3 characters, then send the rest of the bar code data from the bar code above. End with a carriage return.

Command string: **F503F10D**

F5 is the "Move the cursor forward a number of characters" command

03 is the number of characters to move the cursor

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as:

**4567890ABCDEFGHIJ**

**<CR>**

***Move the cursor backward a number of characters***

- F6 Move the cursor back "nn" characters from current cursor position. *Syntax = F6nn* where nn is the numeric value (00-99) for the number of characters the cursor should be moved back.

***Move the cursor to the beginning***

- F7 Move the cursor to the first character in the input message. *Syntax = F7.*

**FE and F7 Example: Manipulate bar codes that begin with a 1**

Search for bar codes that begin with a 1. If a bar code matches, move the cursor back to the beginning of the data and send 6 characters followed by a carriage return. Using the bar code above:

Command string: **FE31F7F2060D**

FE is the "Compare characters" command

31 is the hex value for 1

F7 is the "Move the cursor to the beginning" command

F2 is the "Send a number of characters" command

06 is the number of characters to send

0D is the hex value for a CR

The data is output as:

**123456**

**<CR>**

***Move the cursor to the end***

- EA Move the cursor to the last character in the input message. *Syntax = EA.*

**Search Commands**

***Search forward for a character***

- F8 Search the input message forward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character. *Syntax = F8xx* where xx stands for the search character's hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

---

**F8 Example: Send bar code data that starts after a particular character**

Search for the letter “D” in bar codes and send all the data that follows, including the “D.” Using the bar code above:

Command string: **F844F10D**

F8 is the “Search forward for a character” command

44 is the hex value for “D”

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as:

**DEFGHIJ**

**<CR>**

***Search backward for a character***

- F9 Search the input message backward for “xx” character from the current cursor position, leaving the cursor pointing to the “xx” character. *Syntax = F9xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

***Search forward for a string***

- B0 Search forward for “s” string from the current cursor position, leaving cursor pointing to “s” string. *Syntax = B0nnnnS* where nnnn is the string length (up to 9999), and S consists of the ASCII hex value of each character in the match string. For example, B0000454657374 will search forward for the first occurrence of the 4 character string “Test.” Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

**B0 Example: Send bar code data that starts after a string of characters**

Search for the letters “FGH” in bar codes and send all the data that follows, including “FGH.” Using the bar code above:

Command string: **B00003464748F10D**

B0 is the “Search forward for a string” command

0003 is the string length (3 characters)

46 is the hex value for “F”

47 is the hex value for “G”

48 is the hex value for “H”

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as:

**FGHIJ**

**<CR>**

***Search backward for a string***

- B1 Search backward for “s” string from the current cursor position, leaving cursor pointing to “s” string. *Syntax = B1nnnnS* where nnnn is the string length (up to 9999), and S consists of the ASCII hex value of each character in the match string. For example, B1000454657374 will search backward for the first occurrence of the 4 character string “Test.” Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

---

### ***Search forward for a non-matching character***

- E6 Search the input message forward for the first non-“xx” character from the current cursor position, leaving the cursor pointing to the non-“xx” character. *Syntax = E6xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

**E6 Example: Remove zeroes at the beginning of bar code data**

This example shows a bar code that has been zero filled. You may want to ignore the zeroes and send all the data that follows. E6 searches forward for the first character that is not zero, then sends all the data after, followed by a carriage return. Using the bar code above:

Command string: **E630F10D**

E6 is the “Search forward for a non-matching character” command

30 is the hex value for 0

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as:

**37692**

**<CR>**

### ***Search backward for a non-matching character***

- E7 Search the input message backward for the first non-“xx” character from the current cursor position, leaving the cursor pointing to the non-“xx” character. *Syntax = E7xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

## ***Miscellaneous Commands***

### ***Suppress characters***

- FB Suppress all occurrences of up to 15 different characters, starting at the current cursor position, as the cursor is advanced by other commands. When the FC command is encountered, the suppress function is terminated. The cursor is not moved by the FB command.  
*Syntax = FBnnxxyy . .zz* where nn is a count of the number of suppressed characters in the list, and xxyy .. zz is the list of characters to be suppressed.

**FB Example: Remove spaces in bar code data**

This example shows a bar code that has spaces in the data. You may want to remove the spaces before sending the data. Using the bar code above:

Command string: **FB0120F10D**

FB is the “Suppress characters” command

01 is the number of character types to be suppressed

20 is the hex value for a space

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as:

**34567890**

**<CR>**

---

### **Stop suppressing characters**

FC Disables suppress filter and clear all suppressed characters. *Syntax = FC.*

### **Replace characters**

E4 Replaces up to 15 characters in the output message, without moving the cursor. Replacement continues until the E5 command is encountered. *Syntax = E4nnxx<sub>1</sub>xx<sub>2</sub>yy<sub>1</sub>yy<sub>2</sub>...zz<sub>1</sub>zz<sub>2</sub>* where nn is the total count of the number of characters in the list (characters to be replaced plus replacement characters); xx<sub>1</sub> defines characters to be replaced and xx<sub>2</sub> defines replacement characters, continuing through zz<sub>1</sub> and zz<sub>2</sub>.

#### **E4 Example: Replace zeroes with CRs in bar code data**

If the bar code has characters that the host application does not want included, you can use the E4 command to replace those characters with something else. In this example, you will replace the zeroes in the bar code above with carriage returns.

Command string: **E402300DF10D**

E4 is the “Replace characters” command

02 is the total count of characters to be replaced, plus the replacement characters (0 is replaced by CR, so total characters = 2)

30 is the hex value for 0

0D is the hex value for a CR (the character that will replace the 0)

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as:

**1234**

**5678**

**ABC**

**<CR>**

### **Stop replacing characters**

E5 Terminates character replacement. *Syntax = E5.*

### **Compare characters**

FE Compare the character in the current cursor position to the character “xx.” If characters are equal, move the cursor forward one position. *Syntax = FExx* where xx stands for the comparison character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

### **Compare string**

B2 Compare the string in the input message to the string “s.” If the strings are equal, move the cursor forward past the end of the string. *Syntax = B2nnnnS* where nnnn is the string length (up to 9999), and S consists of the ASCII hex value of each character in the match string. For example, B2000454657374 will compare the string at the current cursor position with the 4 character string “Test.” Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#), beginning on page A-3 for decimal, hex and character codes.

### **Check for a number**

EC Check to make sure there is an ASCII number at the current cursor position. The format is aborted if the character is not numeric.

#### **EC Example: Only output the data if the bar code begins with a number**

If you want only data from bar codes that begin with a number, you can use EC to check for the number.

Command string: **ECF10D**

EC is the “Check for a number” command

F1 is the “Send all characters” command

0D is the hex value for a CR

---

If this bar code is read,  the next data format, if there is one, will be used on the data. If there is no other format, the format fails and the raw data is output as **AB1234**.

If this bar code is read:  the data is output as:

**1234AB**  
<CR>

### **Check for non-numeric character**

ED Check to make sure there is a non-numeric ASCII character at the current cursor position. The format is aborted if the character is numeric.

**ED Example: Only output the data if the bar code begins with a letter**

If you want only data from bar codes that begin with a letter, you can use ED to check for the letter.

Command string: **EDF10D**

ED is the “Check for a non-numeric character” command

F1 is the “Send all characters” command

0D is the hex value for a CR

If this bar code is read,  the next data format, if there is one, will be used on this data. If there is no other format, the format fails and the raw data is output as **1234AB**.

If this bar code is read:  the data is output as:

**AB1234**  
<CR>

### **Insert a delay**

EF Inserts a delay of up to 49,995 milliseconds (in multiples of 5), starting from the current cursor position. Syntax = EFnnnn where nnnn stands for the delay in 5ms increments, up to 9999. This command can only be used with keyboard emulation.a

### **Discard Data**

B8 Discards types of data. For example, you may want to discard Code 128 bar codes that begin with the letter A. In step 4 ([page 5-1](#)), select 6A (for Code 128), and in step 5, select 9999 (for all lengths). Enter FE41B8 to compare and discard Code 128 bar codes that begin with the letter A. *Syntax = B8.*

*Note: The B8 command must be entered after all other commands.*

*The Data Format must be **Required** (see [page 5-12](#)) in order for the B8 command to work.*

*If Data Format is **On, but Not Required** ([page 5-12](#)), bar code data that meets the B8 format is scanned and output as usual.*

*Because the data format needs to be **On and Required** ([page 5-12](#)) for the B8 command, you must input data formats for all bar codes you wish to discard as well as all bar codes you wish to output.*

*Other data format settings impact the B8 command. If Data Format Non-Match Error Tone is **On** ([page 5-13](#)), the scan engine emits an error tone. If Data format Non-Match Error Tone is **Off**, the code is disabled for reading and no tone is sounded.*

---

## Data Formatter

When Data Formatter is turned Off, the bar code data is output to the host as read, including prefixes and suffixes.

You may wish to require the data to conform to a data format you have created and saved. The following settings can be applied to your data format:

### Data Formatter On, Not Required, Keep Prefix/Suffix

Scanned data is modified according to your data format, and prefixes and suffixes are transmitted.

### Data Formatter On, Not Required, Drop Prefix/Suffix

Scanned data is modified according to your data format. If a data format is found for a particular symbol, those prefixes and suffixes are not transmitted. If a data format is *not* found for that symbol, the prefixes and suffixes *are* transmitted.

### Data Format Required, Keep Prefix/Suffix

Scanned data is modified according to your data format, and prefixes and suffixes are transmitted. Any data that does not match your data format requirements generates an error tone and the data in that bar code is not transmitted. If you wish to process this type of bar code without generating an error tone, see [Primary/Alternate Data Formats](#).

### Data Format Required, Drop Prefix/Suffix

Scanned data is modified according to your data format. If a data format is found for a particular symbol, those prefixes and suffixes are not transmitted. Any data that does not match your data format requirements generates an error tone. If you wish to process this type of bar code without generating an error tone, see [Primary/Alternate Data Formats](#).

Choose one of the following options. *Default = Data Formatter On, Not Required, Keep Prefix/Suffix.*

---

## ***Primary/Alternate Data Formats***

You can save up to four data formats, and switch between these formats. Your primary data format is saved under **0**. Your other three formats are saved under **1**, **2**, and **3**. To set your device to use one of these formats, scan one of the bar codes below.

ALTFNM0.

**Data Format 3**

## Symbologies

This programming section contains the following menu selections. Refer to [Chapter 10](#) for settings and defaults.

- All Symbologies
- Aztec Code
- China Post (Hong Kong 2 of 5)
- Chinese Sensible (Han Xin) Code
- Codabar
- Codablock A
- Codablock F
- Code 11
- Code 128
- Code 32 Pharmaceutical (PARAF)
- Code 39
- Code 93
- Data Matrix
- EAN/JAN-13
- EAN/JAN-8
- GS1 Composite Codes
- GS1 DataBar Expanded
- GS1 DataBar Limited
- GS1 DataBar Omnidirectional
- GS1 Emulation
- GS1-128
- Interleaved 2 of 5
- Korea Post
- Matrix 2 of 5
- MaxiCode
- MicroPDF417
- MSI
- NEC 2 of 5
- Postal Codes - 2D
- Postal Codes - Linear
- PDF417
- GS1 DataBar Omnidirectional
- QR Code
- Straight 2 of 5 IATA (two-bar start/stop)
- Straight 2 of 5 Industrial (three-bar start/stop)
- TCIF Linked Code 39 (TLC39)
- UPC-A
- UPC-A
- UPC-A/EAN-13 with Extended Coupon Code
- UPC-E0
- UPC-E1

### All Symbologies

If you want to decode all the symbologies allowable for your scanner, scan the **All Symbologies On** code. If on the other hand, you want to decode only a particular symbology, scan **All Symbologies Off** followed by the On symbol for that particular symbology.

*Note: Scanner performance may reduce by scanning All Symbologies On. Only scan All Symbologies On when needed.*

ALLENA1.  
All Symbologies On

ALLENA0.  
All Symbologies Off

*Note: When All Symbologies On is scanned, 2D Postal Codes are not enabled. 2D Postal Codes must be enabled separately.*

### Message Length Description

You are able to set the valid reading length of some of the bar code symbologies. You may wish to set the same value for minimum and maximum length to force the scanner to read fixed length bar code data. This helps reduce the chances of a misread.

**EXAMPLE:** Decode only those bar codes with a count of 9-20 characters.  
Min. length = 09Max. length = 20

---

**EXAMPLE:** Decode only those bar codes with a count of 15 characters.  
Min. length = 15Max. length = 15

For a value other than the minimum and maximum message length defaults, scan the bar codes included in the explanation of the symbology, then scan the digit value of the message length and **Save** bar codes on the [Programming Chart](#) inside the back cover of this manual. The minimum and maximum lengths and the defaults are included with the respective symbologies.

## Codabar

<Default All Codabar Settings>

### Codabar On/Off

### Codabar Start/Stop Characters

Start/Stop characters identify the leading and trailing ends of the bar code. You may either transmit, or not transmit Start/Stop characters. *Default = Don't Transmit.*

### Codabar Check Character

Codabar check characters are created using different "modulos." You can program the scanner to read only Codabar bar codes with Modulo 16 check characters. *Default = No Check Character.*

**No Check Character** indicates that the scanner reads and transmits bar code data with or without a check character.

When Check Character is set to **Validate and Transmit**, the scanner will only read Codabar bar codes printed with a check character, and will transmit this character at the end of the scanned data.

When Check Character is set to **Validate, but Don't Transmit**, the unit will only read Codabar bar codes printed **with** a check character, but will not transmit the check character with the scanned data.

CBRCK22.  
Validate Modulo 16  
and Transmit

CBRCK21.  
Validate Modulo 16, but  
Don't Transmit

### Codabar Concatenation

Codabar supports symbol concatenation. When you enable concatenation, the scanner looks for a Codabar symbol having a “D” start character, adjacent to a symbol having a “D” stop character. In this case the two messages are concatenated into one with the “D” characters omitted.

A 1 2 3 4 D D 5 6 7 8 A

Select Require to prevent the scanner from decoding a single “D” Codabar symbol without its companion. This selection has no effect on Codabar symbols without Stop/Start D characters.

CBRCCT1.  
On

CBRCCT0.  
\* Off

CBRCCT2.  
Require

### Codabar Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 2-60. Minimum Default = 4, Maximum Default = 60.

CBRMIN.  
Minimum Message Length

CBRMAX.  
Maximum Message Length

---

## Code 39

< Default All Code 39 Settings >

### Code 39 On/Off

### Code 39 Start/Stop Characters

Start/Stop characters identify the leading and trailing ends of the bar code. You may either transmit, or not transmit Start/Stop characters. *Default = Don't Transmit.*

### Code 39 Check Character

**No Check Character** indicates that the scanner reads and transmits bar code data with or without a check character.

When Check Character is set to **Validate, but Don't Transmit**, the unit only reads Code 39 bar codes printed with a check character, but will not transmit the check character with the scanned data.

When Check Character is set to **Validate and Transmit**, the scanner only reads Code 39 bar codes printed with a check character, and will transmit this character at the end of the scanned data. *Default = No Check Character.*

---

## Code 39 Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 0-48. Minimum Default = 0, Maximum Default = 48.

C39MIN.

Minimum Message Length

C39MAX.

Maximum Message Length

## Code 39 Append

This function allows the scanner to append the data from several Code 39 bar codes together before transmitting them to the host computer. When the scanner encounters a Code 39 bar code with the append trigger character(s), it buffers Code 39 bar codes until it reads a Code 39 bar code that does not have the append trigger. The data is then transmitted in the order in which the bar codes were read (FIFO). *Default = Off.*

C39APP1.

On

C39APP0.

\* Off

## Code 32 Pharmaceutical (PARAF)

Code 32 Pharmaceutical is a form of the Code 39 symbology used by Italian pharmacies. This symbology is also known as PARAF.

*Note: Trioptic Code (page 6-30) must be turned off while scanning Code 32 Pharmaceutical codes.*

C39B321.

On

C39B320.

\* Off

## Full ASCII

If Full ASCII Code 39 decoding is enabled, certain character pairs within the bar code symbol will be interpreted as a single character. For example: \$V will be decoded as the ASCII character SYN, and /C will be decoded as the ASCII character #. *Default = Off.*

|         |         |          |      |      |      |      |        |
|---------|---------|----------|------|------|------|------|--------|
| NUL %U  | DLE \$P | SP SPACE | 0 0  | @ %V | P P  | ' %W | p +P   |
| SOH \$A | DC1 \$Q | ! /A     | 1 1  | A A  | Q Q  | a +A | q +Q   |
| STX \$B | DC2 \$R | " /B     | 2 2  | B B  | R R  | b +B | r +R   |
| ETX \$C | DC3 \$S | # /C     | 3 3  | C C  | S S  | c +C | s +S   |
| EOT \$D | DC4 \$T | \$ /D    | 4 4  | D D  | T T  | d +D | t +T   |
| ENQ \$E | NAK \$U | % /E     | 5 5  | E E  | U U  | e +E | u +U   |
| ACK \$F | SYN \$V | & /F     | 6 6  | F F  | V V  | f +F | v +V   |
| BEL \$G | ETB \$W | ' /G     | 7 7  | G G  | W W  | g +G | w +W   |
| BS \$H  | CAN \$X | ( /H     | 8 8  | H H  | X X  | h +H | x +X   |
| HT \$I  | EM \$Y  | ) /I     | 9 9  | I I  | Y Y  | i +I | y +Y   |
| LF \$J  | SUB \$Z | * /J     | : /Z | J J  | Z Z  | j +J | z +Z   |
| VT \$K  | ESC %A  | + /K     | ; %F | K K  | [ %K | k +K | { %P   |
| FF \$L  | FS %B   | , /L     | < %G | L L  | \ %L | l +L | %Q     |
| CR \$M  | GS %C   | - -      | = %H | M M  | ] %M | m +M | } %R   |
| SO \$N  | RS %D   | . .      | > %I | N N  | ^ %N | n +N | ~ %S   |
| SI \$O  | US %E   | / /O     | ? %J | O O  | _ %O | o +O | DEL %T |

Character pairs /M and /N decode as a minus sign and period respectively.

Character pairs /P through /Y decode as 0 through 9.

C39ASC1.  
Full ASCII On

C39ASC0.  
\* Full ASCII Off

## Code 39 Code Page

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, scan the bar code below, select the code page with which the bar codes were created (see [ISO 2022/ISO 646 Character Replacements](#) on page A-8), and scan the value and the **Save** bar code from the [Programming Chart](#) on the inside the back cover of this manual. The data characters should then appear properly.

C39DCP.  
Code 39 Code Page

## Interleaved 2 of 5

< Default All Interleaved 2 of 5 Settings >

### Interleaved 2 of 5 On/Off

### Check Digit

**No Check Digit** indicates that the scanner reads and transmits bar code data with or without a check digit.

When Check Digit is set to **Validate, but Don't Transmit**, the unit only reads Interleaved 2 of 5 bar codes printed with a check digit, but will not transmit the check digit with the scanned data.

When Check Digit is set to **Validate and Transmit**, the scanner only reads Interleaved 2 of 5 bar codes printed with a check digit, and will transmit this digit at the end of the scanned data. *Default = No Check Digit.*

### Interleaved 2 of 5 Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 2-80. Minimum Default = 4, Maximum Default = 80.

## NEC 2 of 5

< Default All NEC 2 of 5 Settings >

## NEC 2 of 5 On/Off

## Check Digit

**No Check Digit** indicates that the scanner reads and transmits bar code data with or without a check digit.

When Check Digit is set to **Validate, but Don't Transmit**, the unit only reads NEC 2 of 5 bar codes printed with a check digit, but will not transmit the check digit with the scanned data.

When Check Digit is set to **Validate and Transmit**, the scanner only reads NEC 2 of 5 bar codes printed with a check digit, and will transmit this digit at the end of the scanned data. *Default = No Check Digit.*

---

### **NEC 2 of 5 Message Length**

C93MIN.

**Minimum Message Length**

C93MAX.

**Maximum Message Length**

---

## Code 93 Append

This function allows the scanner to append the data from several Code 93 bar codes together before transmitting them to the host computer. When this function is enabled, the scanner stores those Code 93 bar codes that start with a space (excluding the start and stop symbols), and does not immediately transmit the data. The scanner stores the data in the order in which the bar codes are read, deleting the first space from each. The scanner transmits the appended data when it reads a Code 93 bar code that starts with a character other than a space. *Default = Off.*

## Code 93 Code Page

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, scan the bar code below, select the code page with which the bar codes were created (see [ISO 2022/ISO 646 Character Replacements](#) on page A-8), and scan the value and the **Save** bar code from the [Programming Chart](#) on the inside the back cover of this manual. The data characters should then appear properly.

## GS1-128

<Default All GS1-128 Settings>

### GS1-128 On/Off

### GS1-128 Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-80. Minimum Default = 1, Maximum Default = 80.

## UPC-A

<Default All UPC-A Settings>

### UPC-A On/Off

Note: To convert UPC-A bar codes to EAN-13, see [Convert UPC-A to EAN-13](#) on page 6-23.

---

### **UPC-A Check Digit**

This selection allows you to specify whether the check digit should be transmitted at the end of the scanned data or not.  
*Default = On.*

### **UPC-A Number System**

The numeric system digit of a U.P.C. symbol is normally transmitted at the beginning of the scanned data, but the unit can be programmed so it will not transmit it. *Default = On.*

### **UPC-A Addenda**

This selection adds 2 or 5 digits to the end of all scanned UPC-A data.  
*Default = Off for both 2 Digit and 5 Digit Addenda.*

---

### UPC-A Addenda Required

When **Required** is scanned, the scanner will only read UPC-A bar codes that have addenda. You must then turn on a 2 or 5 digit addenda listed on [page 6-18](#). *Default = Not Required.*

UPAARQ1.  
**Required**

UPAARQ0.  
**\* Not Required**

### UPC-A Addenda Separator

When this feature is on, there is a space between the data from the bar code and the data from the addenda. When turned off, there is no space. *Default = On.*

UPAADS1.  
**\* On**

UPAADS0.  
**Off**

### UPC-A/EAN-13 with Extended Coupon Code

Use the following codes to enable or disable UPC-A and EAN-13 with Extended Coupon Code. When left on the default setting (**Off**), the scanner treats Coupon Codes and Extended Coupon Codes as single bar codes.

If you scan the **Allow Concatenation** code, when the scanner sees the coupon code and the extended coupon code in a single scan, it transmits both as one symbology. Otherwise, it transmits the first coupon code it reads.

If you scan the **Require Concatenation** code, the scanner must see and read the coupon code and extended coupon code in a single read to transmit the data. No data is output unless both codes are read. *Default = Off.*

CPNENA0.  
**\* Off**

CPNENA1.  
**Allow Concatenation**

CPNENA2.  
**Require Concatenation**

---

## Coupon GS1 DataBar Output

If you scan coupons that have both UPC and GS1 DataBar codes, you may wish to scan and output only the data from the GS1 DataBar code. Scan the **GS1 Output On** code below to scan and output only the GS1 DataBar code data. *Default = GS1 Output Off.*

## UPC-E0

<Default All UPC-E Settings>

### UPC-E0 On/Off

Most U.P.C. bar codes lead with the 0 number system. To read these codes, use the **UPC-E0 On** selection. If you need to read codes that lead with the 1 number system, use [UPC-E1](#) (page 6-22). *Default = On.*

### UPC-E0 Expand

UPC-E Expand expands the UPC-E code to the 12 digit, UPC-A format. *Default = Off.*

---

### **UPC-E0 Addenda Required**

When **Required** is scanned, the scanner will only read UPC-E bar codes that have addenda. *Default = Not Required.*

UPEARQ1.

**Required**

UPEARQ0.

**\* Not Required**

### **UPC-E0 Addenda Separator**

When this feature is **On**, there is a space between the data from the bar code and the data from the addenda. When turned **Off**, there is no space. *Default = On.*

## PDF417

< Default All PDF417 Settings >

### PDF417 On/Off

### PDF417 Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-2750. Minimum Default = 1, Maximum Default = 2750.

### MacroPDF417

MacroPDF417 is an implementation of PDF417 capable of encoding very large amounts of data into multiple PDF417 bar codes. When this selection is enabled, these multiple bar codes are assembled into a single data string. *Default = On.*

---

## MicroPDF417

< Default All MicroPDF417 Settings >

### MicroPDF417 On/Off

### MicroPDF417 Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-366. Minimum Default = 1, Maximum Default = 366.

### GS1 Composite Codes

Linear codes are combined with a unique 2D composite component to form a new class called GS1 Composite symbology. GS1 Composite symbologies allow for the co-existence of symbologies already in use. *Default = Off.*

---

## UPC/EAN Version

Scan the **UPC/EAN Version On** bar code to decode GS1 Composite symbols that have a U.P.C. or an EAN linear component. (This does not affect GS1 Composite symbols with a GS1-128 or GS1 linear component.) *Default = UPC/EAN Version Off.*

*Note: If you scan coupons that have both UPC and GS1 DataBar codes, you may wish to scan and output only the data from the GS1 DataBar code. See [Coupon GS1 DataBar Output](#) (page 6-20) for further information.*

## GS1 Composite Code Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-2435. Minimum Default = 1, Maximum Default = 2435.

## GS1 Emulation

The scanner can automatically format the output from any GS1 data carrier to emulate what would be encoded in an equivalent GS1-128 or GS1 DataBar symbol. GS1 data carriers include UPC-A and UPC-E, EAN-13 and EAN-8, ITF-14, GS1-128, and GS1-128 DataBar and GS1 Composites. (Any application that accepts GS1 data can be simplified since it only needs to recognize one data carrier type.)

If **GS1-128 Emulation** is scanned, all retail codes (U.P.C., UPC-E, EAN8, EAN13) are expanded out to 16 digits. If the AIM ID is enabled, the value will be the GS1-128 AIM ID, ]C1 (see [Symbology Charts](#) on page A-1).

If **GS1 DataBar Emulation** is scanned, all retail codes (U.P.C., UPC-E, EAN8, EAN13) are expanded out to 16 digits. If the AIM ID is enabled, the value will be the GS1-DataBar AIM ID, ]em (see [Symbology Charts](#) on page A-1).

If **GS1 Code Expansion Off** is scanned, retail code expansion is disabled, and UPC-E expansion is controlled by the [UPC-E0 Expand](#) (page 6-20) setting. If the AIM ID is enabled, the value will be the GS1-128 AIM ID, ]C1 (see [Symbology Charts](#) on page A-1).

If **EAN8 to EAN13 Conversion** is scanned, all EAN8 bar codes are converted to EAN13 format.

*Default = GS1 Emulation Off.*

### ***TCIF Linked Code 39 (TLC39)***

This code is a composite code since it has a Code 39 linear component and a MicroPDF417 stacked code component. All bar code readers are capable of reading the Code 39 linear component. The MicroPDF417 component can only be decoded if **TLC39 On** is selected. The linear component may be decoded as Code 39 even if TLC39 is off. *Default = Off.*

### ***QR Code***

< *Default All QR Code Settings* >

#### ***QR Code On/Off***

This selection applies to both QR Code and Micro QR Code.

---

## QR Code Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-7089. Minimum Default = 1, Maximum Default = 7089.

QRCMIN.

Minimum Message Length

QRCMAX.

Maximum Message Length

## QR Code Append

This function allows the scanner to append the data from several QR Code bar codes together before transmitting them to the host computer. When the scanner encounters an QR Code bar code with the append trigger character(s), it buffers the number of QR Code bar codes determined by information encoded in those bar codes. Once the proper number of codes is reached, the data is output in the order specified in the bar codes. *Default = On.*

QRCAPP1.

\* On

QRCAPP0.

Off

## QR Code Page

QR Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, scan the bar code below, select the code page with which the bar codes were created (see [ISO 2022/ISO 646 Character Replacements](#) on page A-8), and scan the value and the **Save** bar code from the [Programming Chart](#) on the inside the back cover of this manual. The data characters should then appear properly.

QRCDP.

## Data Matrix

< Default All Data Matrix Settings >

### Data Matrix On/Off

### Data Matrix Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-3116. Minimum Default = 1, Maximum Default = 3116.

### Data Matrix Append

This function allows the scanner to append the data from several Data Matrix bar codes together before transmitting them to the host computer. When the scanner encounters an Data Matrix bar code with the append trigger character(s), it buffers the number of Data Matrix bar codes determined by information encoded in those bar codes. Once the proper number of codes is reached, the data is output in the order specified in the bar codes. *Default = On.*

### Data Matrix Code Page

Data Matrix Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, scan the bar code below, select the code page with which the bar

---

codes were created (see [ISO 2022/ISO 646 Character Replacements](#) on page A-8), and scan the value and the **Save** bar code from the [Programming Chart](#) on the inside the back cover of this manual. The data characters should then appear properly.

## MaxiCode

< Default All MaxiCode Settings >

### MaxiCode On/Off

### MaxiCode Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-150. Minimum Default = 1, Maximum Default = 150.

---

## Aztec Code

< Default All Aztec Code Settings >

### Aztec Code On/Off

### Aztec Code Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-3832. Minimum Default = 1, Maximum Default = 3832.

### Aztec Append

This function allows the scanner to append the data from several Aztec bar codes together before transmitting them to the host computer. When the scanner encounters an Aztec bar code with the append trigger character(s), it buffers the number of Aztec bar codes determined by information encoded in those bar codes. Once the proper number of codes is reached, the data is output in the order specified in the bar codes. *Default = On.*

### Aztec Code Page

Aztec Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, scan the bar code below, select the code page with which the bar

---

codes were created (see [ISO 2022/ISO 646 Character Replacements](#) on page A-8), and scan the value and the **Save** bar code from the [Programming Chart](#) on the inside the back cover of this manual. The data characters should then appear properly.

## Chinese Sensible (Han Xin) Code

< Default All Han Xin Settings >

### Han Xin Code On/Off

### Han Xin Code Message Length

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 1-7833. Minimum Default = 1, Maximum Default = 7833.

---

## Postal Codes - 2D

The following lists the possible 2D postal codes, and 2D postal code combinations that are allowed. Only one 2D postal code selection can be active at a time. If you scan a second 2D postal code selection, the first selection is overwritten. *Default = 2D Postal Codes Off.*

POSTAL0.

### **China Post (Hong Kong 2 of 5) Message Length**

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 2-80. Minimum Default = 4, Maximum Default = 80.

CPCMIN.

Minimum Message Length

## **Korea Post**

<Default All Korea Post Settings>

## **Korea Post**

## **Korea Post Message Length**

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 6-1) for additional information. Minimum and Maximum lengths = 2-80. Minimum Default = 4, Maximum Default = 48.

## **Korea Post Check Digit**

This selection allows you to specify whether the check digit should be transmitted. *Default = Don't Transmit.*

# Imaging Commands

The scan engine is like a digital camera in the way it captures, manipulates, and transfers images. The following commands allow you to alter the way the scan engine performs these functions.

*Note: If you are using the scan engine in a stand, you must set the In-Stand Sensor Mode to Off in order to take images (see [Presentation Centering](#) on page 3-6).*

## Single-Use Basis

Imaging Commands with their modifiers send instructions to the scan engine on a single-use basis, and take effect for a single image capture. Once that capture is complete, the scan engine reverts to its imaging default settings. If you want to permanently change a setting, you must use the serial default commands (see [Chapter 10](#)). When the serial default command is used, that selection becomes the new, permanent setting for the scan engine.

## Command Syntax

Multiple modifiers and commands can be issued within one sequence. If additional modifiers are to be applied to the same command, just add the modifiers to that command. For example, to add 2 modifiers to the Image Snap command, such as setting the Imaging Style to 1P and the Wait for Trigger to 1T, you would enter **IMG SNP1P1T**.

*Note: After processing an image capture command (IMG SNP), you must follow it with an IMG SHP command if you want to see it on your terminal.*

To add a command to a sequence, each new command is separated with a semicolon. For example, to add the Image Ship command to the above sequence, you would enter **IMG SNP1P1T;IMG SHP**.

The imaging commands are:

[Image Snap - IMG SNP](#) (page 7-1)

[Image Ship - IMG SHP](#) (page 7-3)

The modifiers for each of these commands follow the command description.

*Note: The images included with each command description are examples only. The results you achieve may be different from those included in this manual. The quality of the output you receive will vary depending on lighting, quality of the initial image/object being captured, and distance of the scan engine from the image/object. To achieve a high quality image, it is recommended that you position your scan engine 4-6" (10.2-15.2 cm) away from the image/object you are capturing.*

## Step 1 - Take a Picture Using IMG SNP

### Image Snap - IMG SNP

An image is taken whenever the hardware button is pressed, or when the Image Snap (IMG SNP) command is processed.

The image snap command has many different modifiers that can be used to change the look of the image in memory. Any number of modifiers may be appended to the IMG SNP command. For example, you can use the following command to snap an image, increase the gain, and have the beeper sound once the snap is complete: **IMG SNP2G1B**

### IMG SNP Modifiers

#### P - Imaging Style

This sets the Image Snap style.

0P **Decoding Style**. This processing allows a few frames to be taken until the exposure parameters are met. The last frame is then available for further use.

1P **Photo Style (default)**. This mimics a simple digital camera, and results in a visually optimized image.

2P **Manual Style**. This is an advanced style that should only be used by an experienced user. It allows you the most freedom to set up the scan engine, and has no auto-exposure.

#### B - Beeper

Causes a beep to sound after an image is snapped.

0B No beep (*default*)

1B Sounds a beep when the image is captured.

### T - Wait for Trigger

Waits for a hardware button push before taking the image. This is only available when using Photo Style (1P).

0T Takes image immediately (*default*)

1T Waits for a button push, then takes the image

### L - LED State

Determines if the LEDs should be on or off, and when. Ambient illumination (0L) is preferred for taking pictures of color documents, such as ID cards, especially when the scan engine is in a stand. LED illumination (1L) is preferred when the scanner is handheld. LED State is not available when using Decoding Style (0P).

0L LEDs off (*default*)

1L LEDs on

### E - Exposure

Exposure is used in Manual Style only (2P), and allows you to set the exposure time. This is similar to setting a shutter speed on a camera. The exposure time determines how long the scanner takes to record an image. On a bright day, exposure times can be very short because plenty of light is available to help record an image. At nighttime, exposure time can increase dramatically due to the near absence of light. Units are 127 microseconds. (*Default = 7874*)

nE Range: 1 - 7874

Example of Exposure at 7874E with fluorescent lighting:

Example of Exposure at 100E with fluorescent lighting:

### G - Gain

Gain is used in Manual Style only (2P). Like a volume control, the gain modifier boosts the signal and multiplies the pixel value. As you increase the gain, the noise in an image is also amplified.

40G Medium gain

64G Heavy gain (*default*)

96G Maximum gain

Example of Gain at 40G:

Example of Gain at 64G:

Example of Gain at 96G:

---

## W - Target White Value

Sets the target for the median grayscale value in the captured image. For capturing close-up images of high contrast documents, a lower setting, such as 75, is recommended. Higher settings result in longer exposure times and brighter images, but if the setting is too high, the image may be overexposed. Target White Value is only available when using Photo Style (1P). (Default = 90)

nW Range: 0 - 255

Example of White Value at 75W:

Example of White Value at 125W:

Example of White Value at 200W:

## D - Delta for Acceptance

This sets the allowable range for the white value setting (see [W - Target White Value](#)). Delta is only available when using Photo Style (1P). (Default = 25)

nD Range: 0 - 255

## U - Update Tries

This sets the maximum number of frames the scan engine should take to reach the [D - Delta for Acceptance](#). Update Tries is only available when using Photo Style (1P). (Default = 6)

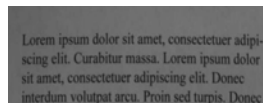

nU Range: 0 - 10

## % - Target Set Point Percentage

Sets the target point for the light and dark values in the captured image. A setting of 75% means 75% of the pixels are at or below the target white value, and 25% of the pixels are above the target white value. Altering this setting from the default is not recommended under normal circumstances. To alter grayscale values, [W - Target White Value](#) should be used. (Default = 50)

n% Range: 1 - 99

Example of Target Set Point Percentage at 97%:

Example of Target Set Point Percentage at 50%:

Example of Target Set Point Percentage at 40%:

## Step 2 - Ship a Picture Using IMGSHIP

### Image Ship - IMGSHIP

An image is taken whenever the button is pressed, or when the Image Snap (IMGSNP) command is processed. The last image is always stored in memory. You can “ship” the image by using the IMGSHIP command.

The image ship commands have many different modifiers that can be used to change the look of the image output. Modifiers affect the image that is transmitted, but do not affect the image in memory. Any number of modifiers may be appended to the IMGSHIP command. For example, you can use the following command to snap and ship a bitmap image with gamma correction and document image filtering: **IMGSNP;IMGSHIP8F75K26U**

### IMGSHIP Modifiers

#### A - Infinity Filter

---

Enhances pictures taken from very long distances (greater than 10 feet or 3m). The Infinity Filter should not be used with [IMGSNP Modifiers](#) (page 7-1).

- 0A Infinity filter off (*default*)
- 1A Infinity filter on

Example of Infinity Filter off (0A)  
from approximately 12 feet  
(3.66m) away:

Example of Infinity Filter on (1A)  
from approximately 12 feet (3.66m)  
away:

### C - Compensation

Flattens the image to account for variations in illumination across the image.

- 0C Compensation disabled (*default*)
- 1C Compensation enabled

Example of Compensation at 0C:

Example of Compensation at 1C:

### D - Pixel Depth

Indicates the number of bits per pixel in the transmitted image (KIM or BMP format only).

- 8D 8 bits per pixel, grayscale image (*default*)
- 1D 1 bit per pixel, black and white image

---

## E - Edge Sharpen

An edge sharpen filter cleans up the edges of an image, making it look cleaner and sharper. While edge sharpening does make the image look cleaner, it also removes some fine detail from the original image. The strength of the edge sharpen filter can be entered from 1 to 24. Entering a 23E gives the sharpest edges, but also increases noise in the image.

- 0E Don't sharpen image (*default*)
- 14E Apply edge sharpen for typical image
- ne Apply edge sharpen using strength  $n$  ( $n = 1-24$ )

Example of Edge Sharpen at 0E:

Example of Edge Sharpen at 24E:

## F - File Format

Indicates the desired format for the image.

- 0F KIM format
- 1F TIFF binary
- 2F TIFF binary group 4, compressed
- 3F TIFF grayscale
- 4F Uncompressed binary (upper left to lower right, 1 pixel/bit, 0 padded end of line)
- 5F Uncompressed grayscale (upper left to lower right, bitmap format)
- 6F JPEG image (*default*)
- 8F BMP format (lower right to upper left, uncompressed)
- 15F BMP Uncompressed raw image

## H - Histogram Stretch

Increases the contrast of the transmitted image. Not available with some image formats.

- 0H No stretch (*default*)
- 1H Histogram stretch

Example of Histogram Stretch at 0H:

Example of Histogram Stretch at 1H:

## I - Invert Image

Invert image is used to rotate the image around the X or Y axis.

- 1ix Invert around the X axis (flips picture upside down)

---

1iy Invert around the Y axis (flips picture left to right)

Example of image not inverted:

Example of image with Invert Image set to 1ix:

Example of image with Invert Image set to 1iy:

### IF- Noise Reduction

Used to reduce the salt and pepper noise in an image.

0if No salt and pepper noise reduction (default)

1if Salt and pepper noise reduction

Example of Noise Reduction Off (0if):

Example of Noise Reduction On (1if):

---

## IR - Image Rotate

- 0ir Image as snapped (rightside up) (default)
- 1ir Rotate image 90 degrees to the right
- 2ir Rotate image 180 degrees (upside down)
- 3ir Rotate image 90 degrees to the left

Example of Image Rotate set to 0ir:

Example of Image Rotate set to 2ir:

Example of Image Rotate set to 1ir:

Example of Image Rotate set to 3ir:

## J - JPEG Image Quality

Sets the desired quality when the JPEG image format is selected. Higher numbers result in higher quality, but larger files. Smaller numbers result in greater amounts of lossy compression, faster transmission times, lower quality, but smaller files. (Default = 50)

- $nJ$  Image is compressed as much as possible while preserving quality factor of  $n$  ( $n = 0 - 100$ )
- 0J worst quality (smallest file)
- 100J best quality (largest file)

## K - Gamma Correction

Gamma measures the brightness of midtone values produced by the image. You can brighten or darken an image using gamma correction. A higher gamma correction yields an overall brighter image. The lower the setting, the darker the image. The optimal setting for text images is 50K.

- 0K Gamma correction off (default)
- 50K Apply gamma correction for brightening typical document image
- $nK$  Apply gamma correction factor  $n$  ( $n = 0-1,000$ )

Example of Gamma Correction set to 0K:

Example of Gamma Correction set to 50K:

Example of Gamma Correction set to 255K:

## L, R, T, B, M - Image Cropping

Ships a window of the image by specifying the left, right, top, and bottom pixel coordinates. Device columns are numbered 0 through 1279, and device rows are numbered 0 through 959.

- $nL$  The left edge of the shipped image corresponds to column  $n$  of the image in memory. Range: 000 - 843. (Default = 0)
- $nR$  The right edge of the shipped image corresponds to column  $n - 1$  of the image in memory. Range: 000 - 843. (Default = all columns)
- $nT$  The top edge of the shipped image corresponds to row  $n$  of the image in memory. Range: 000 - 639. (Default = 0)
- $nB$  The bottom edge of the shipped image corresponds to row  $n - 1$  of the image in memory. Range: 000 - 639. (Default = all rows)

Uncropped Image:

Example of Image Crop set to 300R:

Example of Image Crop set to 300L:

Example of Image Crop set to 200B:

Example of Image Crop set to 200T:

Alternately, specify the number of pixels to cut from the outside margin of the image; thus only the center pixels are transmitted.

- $nM$  Margin: cut  $n$  columns from the left,  $n + 1$  columns from the right,  $n$  rows from the top, and  $n + 1$  rows from the bottom of the image. Ship the remaining center pixels. Range: 0 - 238. (Default = 0, or full image)

Example of Image Crop set to 238M:

## P - Protocol

Used for shipping an image. Protocol covers two features of the image data being sent to the host. It addresses the protocol used to send the data (Hmodem, which is an Xmodem 1K variant that has additional header information), and the format of the image data that is sent.

- 0P None (raw data)
- 2P None (default for USB)
- 3P Hmodem compressed (default for RS232)
- 4P Hmodem

## S - Pixel Ship

Pixel Ship sizes an image in proportion to its original size. It decimates the image by shipping only certain, regularly spaced pixels. For example, **4S** would transmit every fourth pixel from every fourth line. The smaller number of pixels shipped, the smaller the image, however, after a certain point the image becomes unusable.

- 1S ship every pixel (default)
- 2S ship every 2nd pixel, both horizontally and vertically

3S ship every 3rd pixel, both horizontally and vertically

Example of Pixel Ship set to 1S:

Example of Pixel Ship set to 2S:

Example of Pixel Ship set to 3S:

## U - Document Image Filter

Allows you to input parameters to sharpen the edges and smooth the area between the edges of text in an image. This filter should be used with gamma correction (see [page 7-7](#)), with the scan engine in a stand, and the image captured using the command:

**IMGSNP1P0L168W90%32D**

This filter typically provides better JPEG compression than the standard E - Edge Sharpen command (see [page 7-9](#)). This filter also works well when shipping pure black and white images (1 bit per pixel). The optimal setting is 26U.

0U Document image filter off (*default*)

26U Apply document image filter for typical document image

nU Apply document image filter using grayscale threshold n. Use lower numbers when the image contrast is lower. 1U will have a similar effect to setting [E - Edge Sharpen](#) (page 7-5) to 22e. Range: 0-255.

Example of Document Image Filter set to 0U:

Example of Document Image Filter set to 26U:

## V - Blur Image

Smooths transitions by averaging the pixels next to the hard edges of defined lines and shaded areas in an image.

0V Don't blur (*default*)

1V Blur

Example of Blur Image Off (0V):

Example of Blur Image On (1V):

## W - Histogram Ship

A histogram gives a quick picture of the tonal range of an image, or key type. A low-key image has detail concentrated in the shadows; a high-key image has detail concentrated in the highlights; and an average-key image has detail concentrated in the midtones. This modifier ships the histogram for an image.

0W Don't ship histogram (*default*)

---

1W Ship histogram

Image used for histogram:

Histogram of image at left:

### ***Image Size Compatibility***

If you have applications that expect an image ship to return exactly 640x480 pixels, scan the Force VGA Resolution barcode or imaging command processing (IMGSHIP, IMGSNP) so that EZConfig-Scanning (see page 9-3) and other applications are . *Default = Native Resolution.*

IMGVGA1.

**Force VGA Resolution**

IMGVGA0.

**\* Native Resolution**

## Interface Keys

### Keyboard Function Relationships

The following Keyboard Function Code, Hex/ASCII Value, and Full ASCII “CTRL”+ relationships apply to all terminals that can be used with the scanner. Refer to [page 2-16](#) enable Control + X (Control + ASCII) Mode.

| Function Code | HEX/ASCII Value | Full ASCII (CTRL + X Mode) |
|---------------|-----------------|----------------------------|
| NUL           | 00              | @                          |
| SOH           | 01              | A                          |
| STX           | 02              | B                          |
| ETX           | 03              | C                          |
| EOT           | 04              | D                          |
| ENQ           | 05              | E                          |
| ACK           | 06              | F                          |
| BEL           | 07              | G                          |
| BS            | 08              | H                          |
| HT            | 09              | I                          |
| LF            | 0A              | J                          |
| VT            | 0B              | K                          |
| FF            | 0C              | L                          |
| CR            | 0D              | M                          |
| SO            | 0E              | N                          |
| SI            | 0F              | O                          |
| DLE           | 10              | P                          |
| DC1           | 11              | Q                          |
| DC2           | 12              | R                          |
| DC3           | 13              | S                          |
| DC4           | 14              | T                          |
| NAK           | 15              | U                          |
| SYN           | 16              | V                          |
| ETB           | 17              | W                          |
| CAN           | 18              | X                          |
| EM            | 19              | Y                          |
| SUB           | 1A              | Z                          |
| ESC           | 1B              | [                          |
| FS            | 1C              | \                          |
| GS            | 1D              | ]                          |
| RS            | 1E              | ^                          |
| US            | 1F              | -                          |

The last five characters in the Full ASCII “CTRL”+ column ([\]6-), apply to US only. The following chart indicates the equivalents of these five characters for different countries.

| Country        | Codes |   |    |   |   |
|----------------|-------|---|----|---|---|
| United States  | [     | \ | ]  | 6 | - |
| Belgium        | [     | < | ]  | 6 | - |
| Scandinavia    | 8     | < | 9  | 6 | - |
| France         | ^     | 8 | \$ | 6 | = |
| Germany        |       | Ã | +  | 6 | - |
| Italy          |       | \ | +  | 6 | - |

### ***To Add a Test Code I.D. Prefix to All Symbologies***

This selection allows you to turn on transmission of a Code I.D. before the decoded symbology. (See the [Symbology Charts](#), beginning on page A-1) for the single character code that identifies each symbology.) This action first clears all current prefixes, then programs a Code I.D. prefix for all symbologies. This is a temporary setting that will be removed when the unit is power cycled.

PRECA2,BK2995C80!

**Add Code I.D. Prefix to  
All Symbologies (Temporary)**

### ***Show Decoder Revision***

---

## Test Menu

When you scan the Test Menu **On** code, then scan a programming code in this manual, the scan engine displays the content of a programming code. The programming function will still occur, but in addition, the content of that programming code is output to the terminal.

*Note: This feature should not be used during normal scan engine operation.*

## TotalFreedom

TotalFreedom is an open system architecture that makes it possible for you create applications that reside on your scan engine. Decoding apps and Data Formatting apps can be created using TotalFreedom. For further information about TotalFreedom, go to our website at [www.honeywellaidc.com](http://www.honeywellaidc.com).

## Application Plug-Ins (Apps)

Any apps that you are using can be turned off or on by scanning the following bar codes. Apps are stored in groups: Decoding, and Formatting. You can enable and disable these groups of apps by scanning that group's **On** or **Off** bar code below. You can also scan the **List Apps** bar code to output a list of all your apps.

*Note: You must reset your device in order for the apps setting to take effect.*

---

## ***EZConfig-Scanning Introduction***

EZConfig-Scanning provides a wide range of PC-based programming functions that can be performed on a scan engine connected to your PC's COM port. EZConfig-Scanning allows you to download upgrades to the scan engine's firmware, change programmed parameters, and create and print programming bar codes. Using EZConfig-Scanning, you can even save/open the programming parameters for a scan engine. This saved file can be e-mailed or, if required, you can create a single bar code that contains all the customized programming parameters and mail or fax that bar code to any location. Users in other locations can scan the bar code to load in the customized programming.

### ***EZConfig-Scanning Operations***

The EZConfig-Scanning software performs the following operations:

#### ***Scan Data***

Scan Data allows you to scan bar codes and display the bar code data in a window. Scan Data lets you send serial commands to the scan engine and receive a scan engine response that can be seen in the Scan Data window. The data displayed in the Scan Data window can either be saved in a file or printed.

#### ***Configure***

Configure displays the programming and configuration data of the scan engine. The scan engine's programming and configuration data is grouped into different categories. Each category is displayed as a tree item under the "Configure" tree node in the application explorer. When one of these tree nodes is clicked, the right-hand side is loaded with the parameters' form belonging to that particular category. The "Configure" tree option has all the programming and configuration parameters specified for a scan engine. You can set or modify these parameters as required. You can later write the modified settings to the scan engine, or save them to a dcf file.

#### ***Imaging***

Imaging provides all the image-related functions that a 2D scan engine can perform. You can capture an image using the current settings, and the image will be displayed in an image window. Images captured from the scan engine can be saved to files in different image formats. You can modify the image settings and save the image settings to an INI file, which can be loaded later to capture new images. Imaging also lets you preview the images continuously captured by the scan engine.

### ***Installing EZConfig-Scanning from the Web***

*Note: EZConfig-Scanning requires .NET software. If .NET is not installed on your PC, you will be prompted to install it during the EZConfig-Scanning installation.*

1. Access the Honeywell web site at [www.honeywellaidc.com](http://www.honeywellaidc.com)
2. Click on the **Resources** tab. Select **Download**.
3. Click on the dropdown for **Select Product Number**. Click on your product number.
4. Click on the listing for **EZConfig-Scanning**.
5. When prompted, select **Save File**, and save the files to the **c:\windows\temp** directory.
6. Once you have finished downloading the file, exit the web site.
7. Using Explorer, go to the **c:\windows\temp** file.
8. Double click on the **Setup.exe** file. Follow the screen prompts to install the EZConfig-Scanning program.
9. If you've selected the defaults during installation, you can click on **Start Menu-All Programs-Honeywell-EZConfig-Scanning**.

---

## Resetting the Factory Defaults

*This selection erases all your settings and resets the scan engine to the original factory defaults. It also disables all plugins.*

If you aren't sure what programming options are in your scan engine, or you've changed some options and want to restore the scan engine to factory default settings, first scan the **Remove Custom Defaults** bar code, then scan **Activate Defaults**. This resets the scan engine to the factory default settings.

DEFOVR.

**Remove Custom Defaults**

DEFAULT.

**Activate Defaults**

The [Menu Commands](#), beginning on page 10-3 list the factory default settings for each of the commands (indicated by an asterisk (\*) on the programming pages).

## Serial Programming Commands

The serial programming commands can be used in place of the programming bar codes. Both the serial commands and the programming bar codes will program the scan engine. For complete descriptions and examples of each serial programming command, refer to the corresponding programming bar code in this manual.

The device must be set to an RS232 interface (see [page 2-1](#)). The following commands can be sent via a PC COM port using terminal emulation software.

### Conventions

The following conventions are used for menu and query command descriptions:

*parameter* A label representing the actual value you should send as part of a command.

[*option*] An optional part of a command.

{*Data*} Alternatives in a command.

**bold** Names of menus, menu commands, buttons, dialog boxes, and windows that appear on the screen.

### Menu Command Syntax

Menu commands have the following syntax (spaces have been used for clarity only):

*Prefix Tag SubTag {Data} [, SubTag {Data}] [: Tag SubTag {Data}] [...]* Storage

Prefix Three ASCII characters: **SYN M CR** (ASCII 22,77,13).

Tag A 3 character case-insensitive field that identifies the desired menu command group. For example, all RS-232 configuration settings are identified with a Tag of **232**.

SubTag A 3 character case-insensitive field that identifies the desired menu command within the tag group. For example, the SubTag for the RS-232 baud rate is **BAD**.

Data The new value for a menu setting, identified by the Tag and SubTag.

Storage A single character that specifies the storage table to which the command is applied. An exclamation point (!) performs the command's operation on the device's volatile menu configuration table. A period (.) performs the command's operation on the device's non-volatile menu configuration table. Use the non-volatile table only for semi-permanent changes you want saved through a power cycle.

### Query Commands

Several special characters can be used to query the device about its settings.

^ What is the default value for the setting(s).

? What is the device's current value for the setting(s).

\* What is the range of possible values for the setting(s). (The device's response uses a dash (-) to indicate a continuous range of values. A pipe (|) separates items in a list of non-continuous values.)

#### **:Name: Field Usage (Optional)**

This command returns the query information from the scan engine.

#### **Tag Field Usage**

When a query is used in place of a Tag field, the query applies to the *entire* set of commands available for the particular storage table indicated by the Storage field of the command. In this case, the SubTag and Data fields should not be used because they are ignored by the device.

#### **SubTag Field Usage**

When a query is used in place of a SubTag field, the query applies only to the subset of commands available that match the Tag field. In this case, the Data field should not be used because it is ignored by the device.

#### **Data Field Usage**

When a query is used in place of the Data field, the query applies only to the specific command identified by the Tag and SubTag fields.

---

## **Concatenation of Multiple Commands**

Multiple commands can be issued within one Prefix/Storage sequence. Only the Tag, SubTag, and Data fields must be repeated for each command in the sequence. If additional commands are to be applied to the same Tag, then the new command sequence is separated with a comma (,) and only the SubTag and Data fields of the additional command are issued. If the additional command requires a different Tag field, the command is separated from previous commands by a semicolon (;).

## **Responses**

The device responds to serial commands with one of three responses:

**ACK** Indicates a good command which has been processed.

**ENQ** Indicates an invalid Tag or SubTag command.

**NAK** Indicates the command was good, but the Data field entry was out of the allowable range for this Tag and SubTag combination, e.g., an entry for a minimum message length of 100 when the field will only accept 2 characters.

When responding, the device echoes back the command sequence with the status character inserted directly before each of the punctuation marks (the period, exclamation point, comma, or semicolon) in the command.

## **Examples of Query Commands**

In the following examples, a bracketed notation [ ] depicts a non-displayable response.

**Example:** What is the range of possible values for Codabar Coding Enable?

**Enter:**     **cbrena\*.**

**Response:** **CBRENA0-1[ACK]**

This response indicates that Codabar Coding Enable (CBRENA) has a range of values from 0 to 1 (off and on).

**Example:** What is the default value for Codabar Coding Enable?

**Enter:**     **cbrena^.**

**Response:** **CBRENA1[ACK]**

This response indicates that the default setting for Codabar Coding Enable (CBRENA) is 1, or on.

**Example:** What is the device's current setting for Codabar Coding Enable?

**Enter:**     **cbrena?.**

**Response:** **CBRENA1[ACK]**

This response indicates that the device's Codabar Coding Enable (CBRENA) is set to 1, or on.

**Example:** What are the device's settings for all Codabar selections?

**Enter:**     **cbr?.**

**Response:** **CBRENA1[ACK],**  
**SSX0[ACK],**  
**CK20[ACK],**  
**CCT1[ACK],**  
**MIN2[ACK],**  
**MAX60[ACK],**  
**DFT[ACK].**

This response indicates that the device's Codabar Coding Enable (CBRENA) is set to 1, or on; the Start/Stop Character (SSX) is set to 0, or Don't Transmit; the Check Character (CK2) is set to 0, or Not Required; concatenation (CCT) is set to 1, or Enabled; the Minimum Message Length (MIN) is set to 2 characters; the Maximum Message Length (MAX) is set to 60 characters; and the Default setting (DFT) has no value.

## Trigger Commands

You can activate and deactivate the scan engine with serial trigger commands. First, the scan engine must be put in Manual Trigger Mode by scanning a Manual Trigger Mode bar code (page 3-5), or by sending a serial menu command for triggering (page 10-8). Once the scan engine is in serial trigger mode, the trigger is activated and deactivated by sending the following commands:

Activate: **SYN T CR**

Deactivate: **SYN U CR**

The scan engine scans until a bar code has been read, until the deactivate command is sent, or until the serial time-out has been reached (see "Read Time-Out" on page 3-5 for a description, and the serial command on page 10-8).

## Resetting the Custom Defaults

If you want the custom default settings restored to your scan engine, scan the **Activate Custom Defaults** bar code below. This resets the scan engine to the custom default settings. If there are no custom defaults, it will reset the scan engine to the factory default settings. Any settings that have not been specified through the custom defaults will be defaulted to the factory default settings.

DEFALT.

**Activate Custom Defaults**

The charts on the following pages list the factory default settings for each of the commands (indicated by an asterisk (\*) on the programming pages).

## Menu Commands

| Selection                        | Setting<br><i>* Indicates default</i>                          | Serial Command<br><i># Indicates a numeric entry</i> | Page |

# Maintenance and Troubleshooting

## Repairs

Repairs and/or upgrades are not to be performed on this product. These services are to be performed only by an authorized service center. See ["Customer Support" on page vii](#) for further information.

### Inspecting Cords and Connectors

Inspect the scan engine's interface cable and connector for wear or other signs of damage. A badly worn cable or damaged connector may interfere with scan engine operation. Contact your Honeywell distributor for information about cable replacement.

## Troubleshooting

The scan engine automatically performs self-tests whenever you turn it on. If your scan engine is not functioning properly, review the following Troubleshooting Guide to try to isolate the problem.

*Is the power on? Is the red or green aiming illumination line on?*

If the aiming line doesn't appear, check that:

- The cable is connected properly.
- The host system power is on (if external power isn't used).

*Is the scan engine having trouble reading your symbols?*

If the scan engine isn't reading symbols well, check that the symbols:

- Aren't smeared, rough, scratched, or exhibiting voids.
- Aren't coated with frost or water droplets on the surface.
- Are enabled in the scan engine or in the decoder to which the scan engine connects.

*Is the bar code displayed but not entered?*

The bar code is displayed on the host device correctly, but you still have to press a key to enter it (the Enter/Return key or the Tab key, for example).

You need to program a suffix. Programming a suffix enables the scan engine to output the bar code data plus the key you need (such as "CR") to enter the data into your application. Refer to ["Prefix/Suffix Overview" on page 4-1](#) for further information.

*Does the scan engine read the bar code incorrectly?*

If the scan engine reads a bar code, but the data is not displayed correctly on the host screen:

- The scan engine may not be programmed for the appropriate terminal interface.  
For example, you scan "12345" and the host displays "@es%."

Reprogram the scan engine with the correct Plug and Play or Terminal selection bar code. See [Chapter 2](#) and [Chapter 3](#).

The scan engine may not be programmed to output your bar code data properly.  
For example, you scan "12345" and the host displays "A12345B."

Reprogram the scan engine with the proper symbology selections. See [Chapter 6](#).

*The scan engine won't read your bar code at all.*

1. Scan the sample bar codes in the back of this manual. If the scan engine reads the sample bar codes, check that your bar code is readable.  
Verify that your bar code symbology is enabled (see [Chapter 6](#)).
2. If the scan engine still can't read the sample bar codes, scan ["All Symbologies" on page 6-1](#).

If you aren't sure what programming options have been set in the scan engine, or if you want the factory default settings restored, scan [Resetting the Factory Defaults](#) on page 9-4.

## Reference Charts

### Symbology Charts

Note: “m” represents the AIM modifier character. Refer to International Technical Specification, Symbology Identifiers, for AIM modifier character details.

Prefix/Suffix entries for specific symbologies override the universal (All Symbologies, 99) entry.

Refer to [Data Editing](#) beginning on page 4-1 and [Data Formatting](#) beginning on page 5-1 for information about using Code ID and AIM ID.

## ASCII Conversion Chart (Code Page 1252)

In keyboard applications, ASCII Control Characters can be represented in 3 different ways, as shown below. The CTRL+X function is OS and application dependent. The following table lists some commonly used Microsoft functionality. This table applies

to U.S. style keyboards. Certain characters may differ depending on your Country Code/PC regional settings.

| Non-printable characters |     | ASCII control | Keyboard Control + ASCII (CTRL+X) Mode |  |                     |
|--------------------------|-----|---------------|--|--|---------------------|
| DEC                      | HEX | Char          | Control + X Mode Off (KBDCAS0)         | Windows Mode Control + X Mode On (KBDCAS2) |                     |
| DEC                      | HEX | Char          | Control + X Mode Off (KBDCAS0)         | CTRL + X                                   | CTRL + X function   |
| 0                        | 00  | NUL           | Reserved                               | CTRL+ @                                    |                     |
| 1                        | 01  | SOH           | NP Enter                               | CTRL+ A                                    | Select all          |

## ISO 2022/ISO 646 Character Replacements

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, select the code page with which the bar codes were created. The data characters should then appear properly.

| Code Page Selection Method/Country   | Standard         | Keyboard Country | Honeywell Code Page Option |
|--|------------------|------------------|----------------------------|
| United States (standard ASCII)   | ISO/IEC 646-IRV  | n/a              | 1                          |

## Keyboard Key References

104 Key U.S. Style Keyboard

105 Key European Style Keyboard

## Required Safety Label

## ESD Precautions

The scan engine is shipped in ESD safe packaging. Use care when handling the scan engine outside its packaging. Be sure grounding wrist straps and properly grounded work areas are used.

## Dust and Dirt

The scan engine must be sufficiently enclosed to prevent dust particles from gathering on the scan engine and lens. When stocking the unit, keep it in its protective packaging. Dust and other external contaminants will eventually degrade unit performance.

## Product Environmental Information

Refer to [www.honeywellaidc.com/environmental](http://www.honeywellaidc.com/environmental) for the RoHS / REACH / WEEE information.
